

Table of Contents

1	INTRODUCTION	1
1.1	QCD as a theory of strong interaction	3
1.1.1	Running coupling and QCD beta function	5
1.2	Deep inelastic scattering and the parton model	8
1.2.1	QCD improved parton model and universal parton distributions	12
1.2.2	Scaling violation and DGLAP evolution equations	14
1.3	Polarised parton distributions	19
1.4	DIS Experiments	21
1.5	Method of characteristics	24
1.6	Outline of the thesis	28
2	APPROXIMATE ANALYTICAL SOLUTION OF DGLAP EQUATION.	31
2.1	Formalism	32
2.1.1	Gluon momentum density	32
2.1.2	Slope of the structure function at low x from gluon density	38
2.2	Results and discussion	39
2.3	Conclusion	43
3	EXPONENT λ OF THE PROTON STRUCTURE FUNCTION	46
3.1	Formalism	47
3.1.1	Phenomenological study of the exponent	51
3.2	Conclusion	52
4	NLO DGLAP GLUON EVOLUTION EQUATION	53
4.1	Formalism	54
4.1.1	General solution of the gluon evolution equation using the method of characteristics.	54
4.1.2	Analytical solution near the initial curve $s = 0$	58
4.1.3	Analytic solution away from the initial curve $s = 0$	59

4.1.4	Compatibility with the Double Leading Logarithmic Approximation (DLLA) result	63
4.1.5	Inclusion of the quark singlet effect	64
4.1.6	The gluon momentum distribution and the logarithmic derivatives of the structure function $F_2(x, Q^2)$	65
4.2	Results and discussion	67
4.3	Conclusion	76
5	SOLUTION OF SINGLET COUPLED DGLAP EQUATIONS	77
5.1	Formalism	78
5.1.1	Singlet coupled DGLAP equations in Taylor approximated form	78
5.1.2	Solution by the method of characteristics	85
5.1.3	Compatibility with earlier solution	92
5.1.4	Non singlet structure function $F_2^{NS}(x, t)$	94
5.2	Results and discussion	97
5.3	Conclusion	110
6	POLARIZED SINGLET COUPLED DGLAP EQUATIONS	111
6.1	Formalism	112
6.1.1	Solution when $x \rightarrow 0$	120
6.1.2	Analytical solution when t is very near the boundary $t = t_0$	125
6.2	Results and discussion	126
7	SUMMARY AND OUTLOOK	134
	APPENDIX	140
A	Eigenvalues of the matrix A of chapter 5	140
	Bibliography	143
