List of Tables

Table 2.1 Chemical and physical requirements defined by ASTM C618 .................. 16
Table 2.2 Chemical and physical requirements defined by IS: 3812 ...................... 16
Table 2.3 Chemical composition of SFA ............................................................... 17
Table 2.4 Chemical composition of some Indian fly ashes ................................. 17
Table 2.5 Some physical properties of SFA as required by IS: 3812 .................... 17
Table 2.6 Lime reactivity of some Indian fly ashes ............................................. 18
Table 2.7 Grain size distribution and characteristics of SFA ............................... 18
Table 2.8 Index properties for classification of fly ash as geo-material .............. 18
Table 3.1 Pertinent features of compaction tests ................................................ 50
Table 3.2a Compaction characteristics of SFA under light compaction [3x16B] ... 51
Table 3.2b Compaction characteristics of SFA under heavy compaction [5x30B] ... 51
Table 3.3a to 3.3e Effect of lime content on compaction characteristics of SFA under light compaction [3x16B] ......................................................... 52-54
Table 3.3f to 3.3j Effect of lime content on compaction characteristics of SFA under heavy compaction [5x30B] ......................................................... 54-56
Table 3.4a to 3.4d Effect of reuse of sample on compaction characteristics of SFA with given lime content and under light and heavy compaction .......... 57-58
Table 3.5 Effect of lime content and compactive effort on optimum moisture content and maximum dry density of SFA ...................................................... 59
Table 3.6a to 3.6b Effect of delayed compaction on compaction and strength characteristics of SFA under light compaction [3x16B] with varying lime content ......................................................... 60
Table 3.7a to 3.7h Water content-dry density-ucs relationship for SFA under light compaction [3x16B] with varying lime content .............................. 77-80
Table 3.7i to 3.7p Water content-dry density-ucsf relationship for SFA under heavy compaction [5x30B] with varying lime content ......................... 81-84

Table 4.1a to 4.1c Effect of wet-dry cycles on unconfined compressive strength of SFA under light compaction [3x16B] with varying lime content .... 132-133

Table 4.2a to 4.2c Effect of wet-dry cycles on unconfined compressive strength of SFA under heavy compaction [5x30B] with varying lime content .. 133-134

Table 4.3 Variation of unconfined compressive strength with different stages of wet-dry cycles for SFA with 5% lime content and under light compaction [3x16B] ........................................................................................................................................ 135

Table 5.1 Free sediment volume index of SFA with varying lime content and curing period .................................................................................................................................................. 171

Table 5.2a Unconfined compressive strength of SFA around OMC under light compaction [3x16B] with varying lime content, curing period and wet-dry cycles .................................................................................................................................................. 172

Table 5.2b Unconfined compressive strength of SFA around OMC under heavy compaction [5x30] with varying lime content, curing period and wet-dry cycles .................................................................................................................................................. 172
