ACKNOWLEDGEMENT

It is indeed an immense honour for me to express my deep sense of gratitude to my two research guides, Professor U.C. Goswami, Department of Zoology, Gauhati University and Dr. S. Dey, Scientist-in Charge, Electron Microscope Division, Sophisticated Analytical Instrumentation Facility, North Eastern Hill University, Shillong under whose dual supervision and valuable guidance, this research work was carried out. The conceptualization of the theme and the topic to that of designing layouts and formats of the thesis was suggested by my guides who also took pains to ensure that my motivation did not waver. It would not have been possible on my part to complete the task without their continuous efforts and constant encouragement. Along the way, I had contemplated several times to abandon the research due to ‘information overload’ coupled with stress and fatigue. Their timely intervention and guidance provided a beacon for me to follow in the dark morass of data, details and statistics.

I sincerely thank the Head of Department of Zoology, Gauhati University and other members of his faculty for their active support and encouragement during the tenure of the work.

I am also grateful to Professor B. Myrboh, Head of the Sophisticated Analytical Instrumentation Facility, for unrestricted use of the Electron Microscopic Facility and other sophisticated analytical instruments in his research centre. In this regard, I must mention my sincere appreciation of the efforts of Shri Joston P.S. Nongkynrih, of Sophisticated Analytical Instrumentation Facility (SAIF), whose unmatched computer skills made my data entry work less painful. Smt B. Dkhar’s assistance in my utilization of the Transmission Electron Microscope has been significant. I also am obliged to all who have assisted me in my sample analysis but who are too numerous to mention.

I owe my gratitude to Fr. I. Warpakma for his permission to carry out the work in the college premises and also for his quiet encouragement. I extend my gratitude to my colleagues in the Department of Pisciculture who supported me throughout my work.

I finally express my affection and love for my husband, two daughters and my parents who tolerated my temporary abdication from household duties with understanding and studied silence. This work could not have been completed without their love and support.
