ACKNOWLEDGEMENTS

At the onset I wish to express my sincere gratitude to Dr. Dilip.C. Nath, Professor and Head, Department of Statistics, Gauhati University, who suggested me to undertake this research work. His assistance, urge and patient guidance at each and every step of the research work have led to the completion of this work.

I owe a special debt of gratitude to late Dr. P.K.Goswami, former Director of IASST, who had sowed the seed of thought of Ph.D. work in me. It was he who had suggested to me about doing research work involving my parent subject (statistics) and my adopted one (computer science). May his soul rest in peace.

Consequently, after his demise, the director of my Institute, Dr. N.N.Dass and our registrar Dr. M.K.Kalita encouraged me and assisted me in my research work, allowing me time off from office work. I am grateful to them.

Next, I am grateful to all the teachers of Department of Statistics who were always ready to suggest solutions to my problems. I am particularly debted to Dr. K.K.Das who removed many a cog in my wheel of research work and to whom I could approach without apprehension.
Next on my list are my friends and colleagues. I am specially grateful to Dr. Amal Deka and Dr. Giti Goswami who provided me with useful tips, to Aparna Dutta and Juri Pathak whose belief in my ability to complete my research work kept my own faith on myself to the optimum level and to M. Singh who assisted me in typing, scanning etc. whenever I wanted of him.

I am grateful to my parents who had seen a vision of their daughter having a research degree. It was their vision that always served as the carrot on the string for me.

Finally, I express my gratitude to my husband, Mr. Jnanendra Kr. Mahanta, who of course not only gave me moral support, but helped me in many ways which eased a lot of tensions, and to my children Piku and Paplu who were as patient as can be expected from 11 year and 5 year old boys.

(Lipi B. Mahanta)
