

LIST OF PLATES

- Plate 4.1 Quartzite with phyllite intercalations of the Shillong Group
- Plate 4.2 Metapelites of the Shillong Group from the eastern part of the area
- Plate 4.3 Quartzites dipping towards the porphyritic granite
- Plate 4.4 Current bedding in the rocks of the Shillong Group
- Plate 4.5 Ripple marks in the rocks of the Shillong Group.
- Plate 4.6 Elongate pebbles in conglomerate of the Shillong Group
- Plate 4.7 Severed and deformed sand balls in the Shillong Group
- Plate 4.8 F_1 fold in metapelite with foliation (S_1) in the Shillong Group
- Plate 4.9 Minor fault in rocks of the Shillong Group
- Plate 4.10 Sharp intraformational F_1 fold in metapelites of the Shillong Group
- Plate 4.11 Rootless F_1 folds in metapelites of the Shillong Group
- Plate 4.12 F_2 folds in the metapelites of the Shillong Group at right angles to F_1 fold
- Plate 4.13 Large open symmetrical F_3 fold in the Shillong Group of rocks
- Plate 4.14 Asymmetrical F_3 folds in the

		rocks of the Shillong Groups	Following
Plate	4.15	Plunging F ₁ fold in the Shillong Group	Chapter
Plate	4.16	Wide shear zone accompanied by drag in the Shillong Group	
Plate	4.17	Pyrite mineralization in crush - zone of the rocks of the Shillong Group	
Plate	4.18	Gash veins in rocks of the Shillong Group	
Plate	4.19	Exfoliation in the Khasi greenstones	
Plate	4.20	Spheroidal boulders of the porphyritic granite	
Plate	4.21	Parallel alignment of potash feldspar phenocrysts of the granite	
Plate	4.22	Elongated basic xenolith parallel to the flow structure of the granite	
Plate	4.23	Contorted and sheared volcanic tuffs	
Plate	4.24	Banded volcanic tuffaceous rocks	
Plate	4.25	Vertical shear zone in the volcanic tuffaceous rocks	IV
Plate	5.1	Secondary growth of quartz in quartzite of the Shillong Group	
Plate	5.2	Rounded zircons in quartzite of the Shillong Group	
Plate	5.3	Xenoblastic quartz in a sericitic matrix in quartzite of the Shillong Group	
Plate	5.4	Elongated interlocking quartz grains in quartzites nearer to the granite	

Plate 5.5	Sutured interlocking quartz grains in quartzite near to the granite	Following Chapter
Plate 5.6	Well recrystallized quartz grains with muscovite matrix in quartzite.	
Plate 5.7	Phyllite structure in the metapelites of the Shillong Group.	
Plate 5.8	S ₁ foliation manifested by crenulation cleavage in metapelite of the Shillong Group	
Plate 5.9	K-feldspar in quartz mica schist of the Shillong Group	
Plate 5.10	S ₁ schistosity in the mica schist of the Shillong Group	
Plate 5.11	Biotite of two generations in the mica schists of the Shillong Group	
Plate 5.12	Biotite and skeletal garnet porphyroblasts in the granetiferous mica schist of the Shillong Group	
Plate 5.13	Photomicrograph of part of pebble the Shillong Group Photomicrograph of part of pebbles and matrix of conglomerate of the Shillong Group.	
Plate 6.1	Sill of the Khasi greenstone in Shillong Group of rocks	
Plate 6.2	Actinolite plates showing ophitic texture in Khasi greenstone	
Plate 6.3	Needles and prisms of actinolite in the Khasi greenstone	
Plate 6.4	Allotriomorph of actinolites after relict pyroxene	
Plate 6.5	Faintly twinned plagioclase	

		within actinolite needles in Khasi greenstone	Following Chapter
Plate	6.6	Complex twins in plagioclase of Khasi greenstone	
Plate	6.7	Magnetite retaining relict pyroxene cleavage in Khasi greenstone	
Plate	6.8	Crude foliation in greenstone from Lad Nongkrem	VI
Plate	6.9	Decussate texture exhibited by actinolite needles in Khasi greenstone	
Plate	7.1	Outcrop of amphibolite	
Plate	7.2	Cummulate structure in amphibolite	
Plate	7.3	Simple twin in hornblende plate of amphibolite	
Plate	7.4	Epidotization of hornblende plate with unaffected core in amphibolite.	
Plate	7.5	Relict pyroxene cleavage in core of hornblende plate in amphibolite	
Plate	7.6	Penetration twin exhibited by hornblende plates in amphibolite	
Plate	7.7	Partially altered pyroxene porphyroblast in amphibolite	
Plate	7.8	Magnetite retaining skeletal pyroxene structure in amphibolite	
Plate	7.9	Porphyroblastic fabric in amphibolite	
Plate	7.10	Kinking in amphibolite	
Plate	7.11	Dolerite dike cutting into amphibolite	

Plate	7.12	Typical ophitic texture in basic dike intruding amphibolite	Following Chapter
Plate	7.13	Partial uralization of pyroxene in dolerite dike	
Plate	7.14	Porphyritic texture in chilled margin of doleritic dike	VII
Plate	8.1	String , vien and patch perthite in potash feldspar phenocryst of the porphyritic granite	
Plate	8.2	Carslbad twinning shown by potash feldspar phenocryst of the porphyritic granite	
Plate	8.3	Microcline from groundmass of porphyritic granite showing combination of carslbad and cross-hatched twinning	
Plate	8.4	Zonally arranged inclusions	
Plate	8.5	Plagioclase exhibiting combination of lamellar and carslbad twins	
Plate	8.6	Sodic rim around plagioclase grain in the porphyritic granite	
Plate	8.7	Coarse-grained sphene in the porphyritic granite	
Plate	8.8	Euhedral zircon from the porphyritic granite	
Plate	8.9	Pencil shaped zircon from the porphyritic granite	
Plate	8.10	Euhedral zircon from the porphyritic granite with	

		inclusions and outgrowth	Following
Plate	8.11	Compositional zoning in zircon from the porphyritic granite quarry	Chapter
Plate	8.12	Zonally arranged inclusions in zircon from the porphyritic granite	VIII
Plate	9.1	Exposure of volcanic tuffaceous rock in a small quarry	
Plate	9.2	Banded volcanic tuffs	
Plate	9.3	Magnetite showing relict pyroxene structure set in a ferrugeneous groundmass in the volcanic tuffaceous rock	
Plate	9.4	Glass shards in a fluidal groundmass in the volcanic tuffs	
Plate	9.5	Ellipsoidal grains of altered feldspar showing flow structure in the volcanic tuffaceous rocks	IX
