Chapter-1

General Introduction and Review of Literature.....	1-57
Introduction	1
Review of Literature	6
1.1. Distribution of vibrios	6
1.2. Taxonomy of vibrios	6
1.2.1. Phenotypic characterization of vibrio	6
1.2.2. Genomic characterization of vibrios	9
1.2.3. Serological characterization of vibrios	13
1.3. Evolution of vibrios.....	15
1.4. History of <i>V.harveyi</i>.....	19
1.5. Bacterial Adaptation	20
1.5.1. Biofilm formation	20
1.5.2. Capsule and EPS	22
1.5.3. Starvation adaptation mechanism	23
1.5.4. Viable but nonculturable response	24
1.5.5. Other adaptations	25
1.6. Virulent factors of Vibrios	25
1.6.1. Extracellular product	25
1.6.2. Adhesins and Outer membrane proteins	27
1.6.3. Lipopolysaccharides	27
1.6.4. Flagella as chemotactic and virulence agent	28
1.6.5. Type Three Secretion System	29
1.6.6. Integron mediated resistance	30
1.6.7. Transposon mediated resistance	32
1.6.8. Resistance mediated by Plasmids	33
1.6.9. Bacteriophage mediated virulence	33
1.6.10. Quorum sensing	34
1.7. Treatment Measures	34
1.7.1. Antibiotic usage and its drawbacks	34
1.7.2. Probiotics as potential prophylactic	36
1.7.3. Immunostimulants	39
1.7.4. Vaccines	41
1.7.5. Phage Therapy	42
1.7.6. Quorum Sensing Inhibition	44
1.8. Diagnostics for shellfish health management	45

1.9. Existence of Beneficial Bacteria	49
1.9.1. Bacterial Communication	49
1.9.2. Fermentative Vibrios	50
1.9.3. Chitin Degradation	50
1.9.4. Degradation of Polycyclic Aromatic Hydrocarbons	51
1.9.5. Mucinase Production	52
1.9.6. Tetrodotoxin (TTX) production	52
1.9.7. Siderophore production	52
1.9.8. Bioactive compound production	53
1.9.9. Enzyme production	53
1.9.10. Bioluminescence as a Reporter System	53
1.9.11. Role in Nutrient Cycling	54
1.10. Vibriosis	56
1.11. Significance of the study.....	56

Chapter 2

Phenotypic characterization and Numerical Taxonomy of vibrios.....	58-107
---	---------------

2.1. Introduction.....	58
2.1.1. History of vibrios	58
2.1.2. Taxonomy of vibrio	59
2.1.3. Numerical Taxonomy of <i>V.harveyi</i>	61
2.2. Materials and Methods	65
2.2.1. Purification and stocking of cultures	65
2.2.2. Phenotypic characterization	67-80
2.2.2.1. Motility assay	67
2.2.2.2. Flagellar Staining	68
2.2.2.3. Oxidation Fermentation reaction	69
2.2.2.4. Hydrogen sulphide production on TSI medium	70
2.2.2.5. Kovac's Oxidase test	70
2.2.2.6. Sensitivity to vibriostat compound	71
2.2.2.7. Catalase Test	71
2.2.2.8. Indole Production	72
2.2.2.9. Methyl Red and Voges-Proskauer tests	72
2.2.2.10. Production of Urease	73
2.2.2.11. Citrate utilization	74
2.2.2.12. Nitrate reduction test	75
2.2.2.13. Aminoacid decarboxylation tests	76
2.2.2.14. ONPG (β -galactosidase) test	78
2.2.2.15. Gluconate test	78

2.2.2.16. Acid and gas production from sugars	79
2.2.2.17. Sodium chloride tolerance test	80
2.2.2.18. Utilization of sugars on GN2 Biolog plates	80
2.2.3. Clustering based on unweighted average linkage	81
2.2.4. Reproducibility Assessment	82
2.2.5. Validation of Dichotomous Key	82
2.3. Results	83-100
2.3.1. Characterization of bacterial isolates	83
2.3.2. Reproducibility assessment	95
2.3.3. Validation of the constructed dichotomous key	100
2.4. Discussion.....	103-107
2.5. Conclusion.....	107

Chapter 3

Genotypic Characterization of vibrios.....	109-167
3.1. Introduction.....	109-118
3.1.1. Genotypic methods for characterization of vibrios	109
3.1.2. 16S rRNA	109
3.1.3. DNA- DNA Hybridization	111
3.1.4. AFLP	111
3.1.5. RAPD	112
3.1.6. Multi Locus Sequence Typing	113
3.1.7. Role of Housekeeping Genes in phylogenetic Analysis	118
3.2. Materials and Methods.....	119-122
3.2.1. DNA extraction using DNAzol (Invitrogen) from 158 isolates	119
3.2.2. Construction of Randomly amplified polymorphic DNA (RAPD) profile using a set of Operon primers	119
3.2.3. Amplification of Housekeeping genes	121
3.3. Results	123-160
3.3.1. RAPD Profiling	123
3.3.2. Banding pattern analysis of housekeeping gene amplicons	143

3.4. Discussion.....	161-165
3.5. Conclusion.....	166

Chapter-4

Phenotypic expression of virulence- <i>In vitro</i> assays.....	168-216
4.1. Introduction	168-171
4.1.1. Bacterial pathogens of aquatic organisms	168
4.1.2. Vibrios and virulence	168
4.1.2.1. Extracellular products	169
4.1.2.2. Outer membrane proteins	170
4.1.2.3. Pathogenic Islands	171
4.1.2.4. Quorum Sensing	171
4.2. Materials and Methods.....	172-187
4.2.1. Detection of hydrolytic potential	172
4.2.1.1. Aesculin Activity	172
4.2.1.2. Amylase activity	173
4.2.1.3. Chitinase activity	174
4.2.1.4. DNAase activity	174
4.2.1.5. Elastin activity	175
4.2.1.6. Gelatinase activity	176
4.2.1.7. Haemolytic Assay on human blood agar and on prawn blood agar	176
4.2.1.8. Lecithinase activity	178
4.2.1.9. Lipase activity	179
4.2.1.10. X-gal assay	179
4.2.2. Siderophore Production	180
4.2.3. Suicide Phenomenon	181
4.2.4. Autoagglutination & Precipitation after boiling	181
4.2.5. Biofilm formation	183
4.2.6. Surface Hydrophobicity	183
4.2.7. Adherence Assay	184
4.2.8. Cytotoxicity Assay	185
4.2.9. Antibiotic Sensitivity Assay	187
4.3. Results	188-210
4.3.1. Phenotypic expression of virulence- <i>In vitro</i> assays	188
4.3.2. Agglutination and Precipitation	189
4.3.3. <i>Biofilm</i> formation, Cell surface Hydrophobicity	

and Adherence	194-196
4.3.4. Cytotoxicity study on Hep-2 Cells	197-204
4.3.5. Antibiotic susceptibility test	204-210
4.4. Discussion.....	211-215
4.4.1. Phenotypic expression of virulence by the isolates	211
4.4.2. Antibiotic susceptibility test	214
4.4.3. Hydrolytic property, auto agglutination and Precipitation Potential	215
4.5. Conclusion.....	215

Chapter 5

Genotypic characterization and Pathogenicity of <i>Vibrio harveyi</i>.....	217-268
---	----------------

5.1. Introduction	217-229
5.1.1. Virulence factors expressed by microorganisms	217
5.1.2. Pathogenicity and virulence of Vibrios	218
5.1.3. Virulent genes of <i>Vibrio harveyi</i>	219
5.1.3.1. <i>toxR</i> and <i>toxS</i> gene cluster	219
5.1.3.2. Protease	220
5.1.3.3. Type Three Secretion System	223
5.1.4. Quorum Sensing and Luminescent genes of <i>Vibrio harveyi</i>	224
5.1.5. Bacteriophages mediated virulence	228
5.1.6. Beneficial forms of vibrios	229
5.2. Materials and Methods.....	230-238
5.2.1. Amplification of Virulent and Lux operon genes	230
5.2.2. Determination the protein profile of <i>V.harveyi</i> by SDS-PAGE	235
5.2.3. Pathogenicity assay of <i>V.harveyi</i> on Gnotobiotic <i>Artemia</i> nauplii	235
5.2.4. Pathogenicity assay of <i>V.harveyi</i> using <i>P. monodon</i> Post-larvae	237
5.3. Results	239-261
5.3.1. Banding pattern of the gene markers	239
5.3.2. Sequence analysis of the virulent and luminescent genes	243
5.3.3. Determination of proteins of <i>V.harveyi</i> (V3)	247
5.3.4. Pathogenicity assay of <i>V.harveyi</i> on Gnotobiotic <i>Artemia</i> nauplii	248

5.3.5. Pathogenicity assay of <i>V.harveyi</i> using <i>P. monodon</i> Post-larvae	252
5.3.6. Correlation of pathogenicity in post-larvae with water quality	255
5.3.7. Correlation of pathogenicity with Amplification of the gene markers	260
5.4. Discussion.....	261-266
5.4.1. Genotypic characterization	261
5.4.2. Analysis of proteins by SDS-PAGE	263
5.4.3. Pathogenicity assay of <i>V.harveyi</i>	264
5.5.Conclusion.....	267-268

Chapter-6

Conclusion and scope of future research	269-282
