</table>
4.3 Results of Kekre’s Centroid search algorithm for different images for varying codebook sizes using LBG and KPE codebook.

4.4 Results of Kekre’s Centroid search algorithm for different images for varying codebook sizes using KMCG and KFCG codebook.

4.5 Results of Kekre’s Median search algorithm for different images for varying codebook sizes using LBG and KPE codebook.

4.6 Results of Kekre’s Median search algorithm for different images for varying codebook sizes using KMCG and KFCG codebook.

4.7 Comparison of ES, KCS and KMS algorithm with respect to total number of Comparisons, total number of ED computations and total CPU units required.

4.8 Comparison of ES, KCS and KMS algorithm with respect to total CPU units required for M=16384 and k=12.

4.9 Comparison of ES, and KCS algorithm with respect to the number of CPU units required relative to KMS algorithm.

5. **Error Minimization Techniques**

5.1 Comparison of minimized error vs number of iteration required for optimization of LBG and KPE codebook of size 256 using Genetic algorithm.

5.2 Comparison of minimized error vs number of iteration required for optimization of KMCG and KFCG codebook of size 256 using Genetic algorithm.
5.3 Comparison of minimized error vs number of iteration required for optimization of LBG and KPE codebook of size 512 using Genetic algorithm.

5.4 Comparison of minimized error vs number of iteration required for optimization of KMCG and KFCG codebook of size 512 using Genetic algorithm.

5.5 Comparison of minimized error vs number of iteration required for optimization of LBG and KPE codebook of size 1024 using Genetic algorithm.

5.6 Comparison of minimized error vs number of iteration required for optimization of KMCG and KFCG codebook of size 1024 using Genetic algorithm.

5.7 Comparison of minimized error vs number of iteration required for optimization of LBG and KPE codebook of size 256 using K-Means algorithm.

5.8 Comparison of minimized error vs number of iteration required for optimization of KMCG and KFCG codebook of size 256 using K-Means algorithm.

5.9 Comparison of minimized error vs number of iteration required for optimization of LBG and KPE codebook of size 512 using K-Means algorithm.

5.10 Comparison of minimized error vs number of iteration required for optimization of KMCG and KFCG codebook of size 512 using K-Means algorithm.

5.11 Comparison of minimized error vs number of iteration required for optimization of LBG and KPE codebook of size 1024 using K-Means algorithm.

5.12 Comparison of minimized error vs number of iteration required for optimization of KMCG and KFCG codebook of size 1024 using K-Means algorithm.
5.13 Comparison of MSE for different sharing between level 1 and level 2 using LBG codebook of size 256.

5.14 Comparison of MSE for different sharing between level 1 and level 2 using LBG codebook of size 512.

5.15 Comparison of MSE for different sharing between level 1 and level 2 using LBG codebook of size 1024.

5.16 Comparison of MSE for different sharing between level 1 and level 2 using KPE codebook of size 256.

5.17 Comparison of MSE for different sharing between level 1 and level 2 using KPE codebook of size 512.

5.18 Comparison of MSE for different sharing between level 1 and level 2 using KPE codebook of size 1024.

5.19 Comparison of MSE for different sharing between level 1 and level 2 using KMCG codebook of size 256.

5.20 Comparison of MSE for different sharing between level 1 and level 2 using KMCG codebook of size 512.

5.21 Comparison of MSE for different sharing between level 1 and level 2 using KMCG codebook of size 1024.

5.22 Comparison of MSE for different sharing between level 1 and level 2 using KFCG codebook of size 256.

5.23 Comparison of MSE for different sharing between level 1 and level 2 using KFCG codebook of size 512.

5.24 Comparison of MSE for different sharing between level 1 and level 2 using KFCG codebook of size 1024.

5.25 The ratio of level 1:level 2 for different Algorithms.

6. Applications

6.1 Co-ordinates of boundary and center point of the tumor.
6.2 Values of Evaluation Function ‘Q’ for various scenes. 113
6.3 Comparison of LBG, KPE, and KFCG algorithms with respect to Average fractional change in speech sample AFCSS and Mean Absolute Error for six different speech signals. 114
6.4 Percentage accuracy obtained for face recognition using DCT and KMCG algorithms. 128
6.5 Percentage accuracy obtained for iris recognition using DCT, LBG, KPE & KFCG algorithms. 134
