3.12. Food, feeding, digestion and casting 24
3.13. Diapauses & Growth 25
3.15. Habit size and behavior 26
3.16. Egestion 26

4. Review of Literature 27

5. Materials and Methods 35
   5.1. Selection of earthworm species 35
   5.2. Selection of *Eisenia fetida* 35
   5.3. Selection of *Eudrilus eugeniae* 35
   5.4. Selection of *Lampito mauritii* 36
   5.5. A schematic diagram of the study 37
   5.6. Procurement and rearing of stock earthworms 38
   5.7. Collection of organic wastes 38
      i. Cow dung (CD) 39
      ii. Silkworm excreta (SWE) 39
      iii. Rabbit excreta (RE) 40
      iv. Goat manure (GM) 40
      v. Sheep manure (SM) 40
      vi. Bat excreta (BE) 40
      vii. Poultry excreta (PE) 40
   5.8. Cow dung and its availability 40
   5.9. Present utilization of Cow dung and problems in utilization of Cow dung 41
   5.10. Present utilization of Goat dung, Sheep dung, Rabbit dung, Poultry dung and Silkworm excreta 42
   5.11. Preparation of Vermibeds 42

6. Growth parameters 44
   6.1. Statistical analysis 44
   6.2. Results 45
6.3. Growth parameters of *E. foetida* grown in Cow dung, Bat dung, Poultry dung, Goat dung and Sheep dung. 45

6.4. Growth parameters of *E. eugeniae* grown in Cow dung, Bat dung, Poultry dung, Goat dung 47

6.5. Growth parameters of *Lampito mauritii* grown in Cow dung, Bat dung, Poultry dung, Goat dung 55

7 Physico-Chemical characterization 57

7.1. Introduction 57

7.1.1. Essential elements in animal Nutrition 57

7.1.2. Essential elements in plant Nutrition 57

7.2. Review of Literature 60

7.3. Methodology 66

7.4. Computation of data and Statistical analysis 67

7.5. Results 68

7.5.1. Physical parameters 68

i. pH (Hydrogen ion concentration) 68

ii. Electrical conductivity 69

iii. Bulk density 70

iv. Total dissolved solids 72

7.5.2. Chemical parameters 73

i. Organic matter 73

ii. Organic carbon 74

iii. Nitrogen 75

iv. Phosphorous 77

v. Potassium 78

vi. Calcium 79

vii. Magnesium 80

viii. Sulphur 82

ix. Sodium 83

x. Zinc 113

xi. Manganese 114
Chapter 7.5.3. Discussion
Physico-Chemical characterization of fresh organic wastes and vermicompost

7.5.4. Physical parameters
i. pH (Hydrogen ion concentration)
ii. Electrical conductivity
iii. Bulk density and total dissolved solids

7.5.5. Chemical parameters
i. Organic matter and Organic carbon
ii. Nitrogen, Phosphorus, Potassium, Calcium and Magnesium
iii. Sulphur, Sodium and Iron
iv. Zinc, Manganese and Copper

Chapter 8. Microbiology

8.1. Introduction
8.1.1. Microorganisms and earthworm
8.1.2. Microorganisms and vermicompost

8.2. Review of Literature

8.3. Methodology
8.3.1. Microbial culture
8.3.2. Enumeration of microbes
8.3.3. Statistical analysis
8.3.4. Bacterial population in different substrates using three different species
8.3.5. Actinomycetes population in different substrates using three different species
8.3.6. Fungal population in different substrates using three different species
8.4. Discussion 144

8.4.1. Bacteria 144
8.4.2. Actinomycetes 145
8.4.3. Fungi 146

9 Field Application studies 149

9.1. Impact of various vermicomposts on the growth and yield of Bhendi, *Abelmoschus esculentus* 149

9.1.1. Morphological characters 149
9.1.2. Growth attributes 155
9.1.3. Yield and Yield components 156

9.2. **Discussion** 159

Effect of vermicompost on the growth and yield of Bhendi, *Abelmoschus esculentus* 159

9.2.1. Morphological characters 159
9.2.2. Growth attributes 161
9.2.3. Yield and Yielded components 163

**SUMMARY** 169

**REFERENCES**
