ACKNOWLEDGEMENT

Words are often less to reveal one’s deep regards. With an understanding that work like this can never be the outcome of a single person, I take this opportunity to express my profound sense of gratitude and respect to all those who helped me throughout the duration of this work.

To start with, all the thanks and appreciations go to my advisors Prof. (Dr.) S. H. Pawar and Prof. (Dr.) B.M. Tiwale for their unconditional support and help, without which this work would have never been accomplished. I have gained tremendous knowledge and experience, academically and professionally, from interacting with them and being part of their research groups. They have been tremendous mentors for me. I would like to thank them for encouraging my research and allowing me to grow as a research scientist. Their advice on both research as well as on my career have been priceless. I also thank the entire faculty members of Center for Interdisciplinary Research for their unhesitating aid whenever I approached them.

My deep appreciations to Dr. V.V. Bhosale and Mr. S. P. Kole, the Registrar and Finance officer of D.Y. Patil University, Kolhapur and other staff members who provided me genuine research facilities available in and out of the university.

I am very much grateful to Dr. M. K. Malve, Director, Mr. B. B. Daundkar, Joint Director and Dr. K. V. Kulkarni, Deputy Director, Directorate of Forensic Science Laboratories (DFSL), Kalina, Mumbai for allowing me to continue my research work and for their constant and valuable support.

I am thankful to the authorities of Department of Atomic Energy-Board of Research in Nuclear Sciences (DAE-BRNS), Trombay, Mumbai, Government of India for the Technical Assistant Fellowship and Department of Science and Technology, Delhi, Government of India for Junior Research Fellowship.
I am thankful to Dr. R. S. Ningthoujam, Dr. K. C. Barick, and Mr. A. I. Prasad, BARC, Mumbai, as they helped a lot in experimental part of my work. I am also grateful to Dr. S. D. Sartale, Pune University, Pune, for being helpful in getting characterizations of my samples.

I am very much thankful to each and every teacher that taught me everything I know. Thanking them is just a way to show them my respect for them; otherwise it is absolutely impossible to bind my feeling of respect for them in any language.

I am very grateful to my friends in Center for Interdisciplinary Research, D.Y. Patil University, Kolhapur, especially Dr. Prajakta, for useful scientific discussions and stimulating new ideas. Of course, the company and the help rendered by them in the department will ever be remembered. I am also thankful to my friends in Shivaji University, Kolhapur and DFSL, Mumbai who have contributed to the successful completion of this work, one way or the other.

Last but not least I would like to thank the special people who supported me throughout my educational endeavour, my family. I am deeply grateful to my parents who instilled in me the love of science and the ambition to do my best in every aspect of my life, to my siblings who did not spare any effort to inspire and help me through this process. My beloved wife, Poonam, who has been there to understand me and manage my family in my absence so that I could concentrate on my research work, I really appreciate her patience. Words cannot express how grateful I am to my family for all of the sacrifices that they’ve made on my behalf. Their prayer for me was what sustained me thus far.

At the end, I would like to thank Lt. Dr. R. P. Patil who taught and encouraged to do research. He has been an inspiration for me as a researcher.

Mr. Rakesh Maruti Patil
