4.6 Per cent distribution of infant deaths by age

4.7 Per cent distribution of neonatal, post-neonatal and infant deaths by Sex of the Child

4.8 Per cent distribution of neonatal, post-neonatal and infant deaths by Birth Order.

4.9 Per cent distribution of neonatal, post-neonatal and infant deaths by Birth Interval

4.10 Per cent distribution of neonatal, post-neonatal and infant deaths by Age of Mother at Birth of the deceased Child.

5.1 Per cent distribution of respondents experienced infant deaths by Place of Delivery

5.2 Per cent distribution of respondents experienced infant deaths by Birth Attendant.

5.3 Per cent distribution of respondents experienced infant deaths by Cutting of the Umbilical Cord.

5.4 Per cent distribution of respondents experienced infant deaths by Dressing of Umbilical Cord.

5.5 Per cent distribution of respondents experienced infant deaths by Type of Medical Care during Pregnancy (Pre-natal)

5.6 Per cent distribution of respondents experienced infant deaths by Type of Medical Care for children

5.7 Per cent distribution of respondents experienced infant deaths by Utilization of Health Services from Primary Health Centre/Sub-centre.

5.8 Per cent distribution of respondents experienced infant deaths by Medical Services received from Peripheral Health Workers.

5.9 Per cent distribution of respondents experienced infant deaths by House Sanitation - An Index.

5.10 Per cent distribution of respondents according to Immunization given to the last Child
5.11 Per cent distribution of neonatal, post-neonatal and infant deaths according to Causes of death

6.1 Per cent distribution of respondents experienced infant deaths by Type of Marriage.

6.2 Per cent distribution of respondents experienced infant deaths by Desire for Extra Children

6.3 Per cent distribution of respondents experienced infant deaths by their Degree of Son Preference.

6.4 Per cent distribution of respondents experienced infant deaths by Kinship interaction

6.5 Per cent distribution of respondents experienced infant deaths by Customs and Habits.

6.6 Per cent distribution of respondents by their perception of Infant Mortality

6.7 Per cent distribution of respondents by Attitude towards Induced Abortion as a method of Family Planning.

6.8 Per cent distribution of Husbands and Wives by the Patterns of Marriage.

7.1 Per cent distribution of respondents experienced infant deaths by Intake of Nutritious Foods

7.2 Per cent distribution of respondents experienced infant deaths by foods avoided during pregnancy

7.3 Per cent distribution of respondents experienced infant deaths by Foods Avoided during Lactation.

7.4 Per cent distribution of respondents experienced infant deaths by Nutritional Status of Mother (external symptoms)

7.5 Per cent distribution of respondents experienced infant deaths by Type of Weaning/Supplementary foods.

7.6 Per cent distribution of respondents experienced infant deaths by Type of Pre-lacteal feeds
7.7 Per cent distribution of respondents experienced infant deaths by Beverages given to children besides breast milk

7.8 Per cent distribution of respondents experienced infant deaths by Initiation of breast feeding

7.9 Per cent distribution of respondents experienced infant deaths by Frequency of breast feeding

7.10 Per cent distribution of respondents experienced infant deaths by Initiation of Weaning/Supplementary foods

7.11 Per cent distribution of respondents experienced infant deaths by Mean Duration of breast feeding

8.1 Correlation co-efficients of predictor variables in relation to infant mortality

8.1 A Zero-order correlation matrix for the age of mothers upto 30 years (younger)

8.1 B Zero-order correlation matrix for the age of mothers above 30 years (older)

8.1 C Zero-order correlation matrix for all mothers

8.2 Predictor variables influencing on experience of infant mortality of all mothers: Stepwise regression analysis

8.3 Predictor variables influencing on experience of infant mortality of younger mothers (< 30 years): Stepwise regression analysis

8.4 Predictor variables influencing on experience of infant mortality of older mothers (> 30 years): Stepwise regression analysis
