### LIST OF TABLES

3.1 Percentage distribution of adolescents and adult respondents according to their age at marriage  
3.2 Percentage distribution of respondents according to their age at marriage and foetal loss  
3.3 Percentage distribution of adolescents and adults according to foetal loss and type of relationship with husband  
3.4 Percentage distribution of respondents according to their age and foetal loss  
4.1 Percentage distribution of adolescents and adult respondents based on age at menarche and foetal loss  
4.2 Mean heights and weights of Indian women  
4.3 Percentage of women at obstetric risk  
4.4 Percentage distribution of adolescents and adult respondents based on maternal height versus foetal loss  
4.5 Percentage distribution of adolescents and adult respondents based on maternal weight and foetal loss  
4.6 Percentage distribution of adolescents and adult respondents based on foetal weight and foetal loss  
5.1 Percentage distribution of adolescents and adult respondents based on age at delivery and foetal loss  
5.2 Perinatal complications and foetal outcome in adolescents and adult respondents  
5.3 Anaemia of pregnancy and foetal loss in adolescents and adult respondents  
5.4 Mode of delivery (operative and non-operative) vs. foetal loss in adolescents and adult respondents  
6.1 Percentage distribution of adolescents and adult respondents based on residence: rural vs. urban and foetal loss
6.2 Percentage distribution of adolescents and adult respondents based on family type and foetal loss

6.3 Percentage distribution of adolescents and adult respondents based on education of the wife and foetal loss

6.4 Percentage distribution of adolescents and adult respondents based on antenatal visits and foetal loss

8.1 Correlation Matrix — Adolescents

8.2 Correlation Matrix — Adults

8.3 Direct, Indirect and total effects of selected variables on foetal loss — Adolescents

8.4 Direct, Indirect and total effects of selected variables on foetal loss — Adults
