LIST OF TABLES

1. List of contents and quantities in the different parts of ‘Winged Bean’
2. Media formulations used for various types of cultures
3. Concentrations and combinations of plant growth regulators (mg/l) for shoot tip/cotyledonary nodal segment cultures
4. Hormonal concentrations (mg/l) and combinations tried for direct regeneration
5. Range of phytohormones used for shoot elongation (mg/l)
6. Range of phytohormones used for callus induction
7. Range of phytohormones used for callus regeneration
8. Hormonal combinations tried for somatic embryogenesis
9. Hormonal combinations tried for rooting
10. Composition of Hoagland’s solution (Epstein, 1972)
11. Effect of various treatments on seed germination of Psophocarpus tetragonolobus (L.) DC
12. Effect of growth regulator concentrations on shoot formation from shoot tip explants in Psophocarpus tetragonolobus (L.) DC
13. Effect of growth regulator concentrations on shoot formation from cotyledonary node explants in Psophocarpus tetragonolobus (L.) DC
14. Effect of plant growth regulators on shoot formation from whole and thin cell layer nodal explants
15. Effect of plant growth regulators on shoot formation from the right and left cotyledon explants
16. Effect of plant growth regulators on shoot and callus formation from whole and thin cell layer stem explants
17. Effect of TDZ on somatic embryogenesis
18. Rooting response of microshoots
19. Primers and the number of bands produced in RAPD analysis
20. Data of RAPD analysis
21. Nei's Original Measures of Genetic Identity and Genetic distance
22. Dendrogram Based on Nei's (1972) Genetic distance: Method = UPGMA-Modified from NEIGHBOR procedure of PHYLIP Version 3.5
23. Rf value of protein profile
