INTRODUCTION 1

CHAPTER I CONVERGENCE THEOREMS 29

1. Approximation of unbounded functions in \( C(0,\infty) \) by the Bernstein-type rational operators \( L_n \) 29

2. Approximation of unbounded functions in \( C(0,\infty) \) by the Bernstein-type rational operators \( R^{(\beta)}_n \) 36

3. Approximation of analytic functions by the operators \( L_n \) and \( R^{(\beta)}_n \) 50

CHAPTER II DIRECT THEOREMS 62

1. A global direct theorem for the operators \( L_n \) when \( f \) belongs to \( \{ C(0,\infty)/x^A \} \) \( (A \geq 0) \) 64

2. A direct theorem for the operators \( L_n \) associated with the approximation in the norm over the space \( \{ C(0,\infty)/x^A \} \) \( (A \geq 0) \) 75

3. Direct theorem associated with uniform approximation for the operators \( R^{(\beta)}_n \) 98

4. A local direct theorem for the operators \( L_n \) 109

CHAPTER III INVERSE THEOREMS 116

1. A global inverse theorem for the operators \( L_n \) when \( f \) belongs to \( \{ C(0,\infty)/x^A \} \) \( (A \geq 0) \) 116

2. An inverse theorem for the operators \( L_n \) associated with approximation in the norm over the space \( \{ C(0,\infty)/x^A \} \) \( (A \geq 0) \) 135
3. Inverse theorem associated with uniform approximation for the operators $R_n^{(\beta)}$  

4. A local inverse theorem for the operators $L_n$  

CHAPTER IV LIPSCHITZ-NIKOLSKII CONSTANTS  

1. A strong asymptotic analysis of  
$$R_n^{(\beta)}\left(\frac{|t-x/(1+a_n x)|^q}{q};x\right) \quad (0 < a < 2, \ 0 < \beta < 1)$$  

2. Lipschitz-Nikolskiǐ Constants for the operators $R_n^{(\beta)}$  

CHAPTER V SATURATION  

1. Voronovskaja type theorems for the operators $L_n$  

2. Voronovskaja type theorems for the operators $R_n^{(\beta)}$  

3. Various saturation theorems for the operators $L_n$  

4. Saturation theorem associated with uniform approximation for the operators $R_n^{(\beta)}$
