<tr>
<td>Table 3.1</td>
<td>Demographic data of clinical sub-groups</td>
<td>77</td>
</tr>
<tr>
<td>Table 3.2</td>
<td>Fundamental frequency ($F_0$ in Hz) and the two formant frequencies ($F_1$ and $F_2$ in Hz) at the transition of original and filtered version of /ɖa/ and /si/ stimuli</td>
<td>85</td>
</tr>
<tr>
<td>Table 3.3</td>
<td>The values of most comfortable level (MCL), background noise level (BNL) &amp; acceptable noise level (ANL) in good and poor hearing aid performers in each sub-group</td>
<td>91</td>
</tr>
<tr>
<td>Table 3.4</td>
<td>Stimulus and recording parameters of FFR at the brainstem level; and LLR &amp; ACC at the cortical levels of the auditory pathway</td>
<td>100</td>
</tr>
<tr>
<td>Table 3.5</td>
<td>Mean (M) and Standard Deviation (SD) of the amplitudes ($\mu V$) of N1 and P2 component of LLR from four electrode sites</td>
<td>110</td>
</tr>
<tr>
<td>Table 3.6</td>
<td>Mean (M) and Standard Deviation (SD) of the amplitudes ($\mu V$) of ACC from four electrode sites</td>
<td>110</td>
</tr>
<tr>
<td>Table 4.1</td>
<td>Mean and standard deviation of the frequencies (in Hz) of first two formants, $F_1$ and $F_2$, at the onset and offset of transition for /ɖa/ stimulus obtained from sub-groups, in the unaided and aided conditions</td>
<td>119</td>
</tr>
<tr>
<td>Table 4.2</td>
<td>Mean and standard deviation of the frequencies (in Hz) of first two formants $F_1$ and $F_2$ at the onset and offset of transition for /si/ stimulus obtained from sub-groups, in the unaided and aided conditions</td>
<td>120</td>
</tr>
<tr>
<td>Table 4.3</td>
<td>Chi-square ($\chi^2$) and p-value of Kruskal-Wallis test on $F_0$ of /ɖa/ and /si/ stimuli between sub-groups, unaided and aided conditions</td>
<td>122</td>
</tr>
<tr>
<td>Table 4.4</td>
<td>Chi-square ($\chi^2$) and p-value of Kruskal-Wallis test on $F_1$ and $F_2$ for /ɖa/ and /si/ stimuli, between sub-groups, in the unaided and aided conditions</td>
<td>122</td>
</tr>
</tbody>
</table>
Table 4.5  The t-value and p-value of paired samples t-test on $F_1$ and $F_2$ at the onset and offset of transition, between the unaided and aided conditions, to each stimulus

Table 4.6  Mean (M) and standard deviation (SD) of spectral energy (in dBSPL) at different octave frequencies to /də/ stimulus in sub-groups, in the unaided and aided conditions

Table 4.7  Mean (M) and standard deviation (SD) of spectral energy (in dBSPL) at different octave frequencies in sub-groups, in the unaided and aided conditions, to /si/ stimulus

Table 4.8  Chi-square $\chi^2(3)$ and p-value of Kruskal-Wallis test on spectral energy between sub-groups, in the unaided and aided conditions, for /də/ and /si/ stimuli

Table 4.9  The mean (M) and standard deviation (SD) of EDI between unaided and aided conditions to /də/ and /si/ stimuli in each sub-group

Table 4.10  Mean (M), standard deviation (SD), $\chi^2(3)$ and p-value of Kruskal-Wallis test on slope of $V-A$ (in $\mu$V/ms), to /də/ stimulus in clinical sub-groups

Table 4.11  Mean (M) and standard deviation (SD) of slope of $V-A$ ($\mu$V/ms) in sub-groups with normal hearing

Table 4.12  The mean (M), standard deviation (SD), t-value and p-values on independent samples t-test on slope of $V-A$ ($\mu$V/ms) in normal hearing and clinical and groups

Table 4.13  Mean (M), standard deviation (SD), $\chi^2(3)$ and p-value of Kruskal-Wallis test on $F_0$ (in Hz), $F_0$ energy and $F_1$ energy to /də/ stimulus in clinical sub-groups

Table 4.14  Mean (M), standard deviation (SD), $\chi^2(3)$ and p-values of Kruskal-Wallis test on $F_0$(in Hz), $F_0$ energy and $F_1$ energy to /si/ stimulus in clinical sub-groups

Table 4.15  /U/-value and p-value of Mann-Whitney U test for $F_0$ (in Hz), $F_0$ energy and $F_1$ energy of FFR to /də/ stimulus from clinical sub-groups
Table 4.16 /U/-value and p-value of Mann-Whitney U test for $F_0$ (in Hz), $F_0$ energy and $F_1$ energy of FFR to /si/ stimulus from clinical sub-groups................................................................. 141

Table 4.17 The mean (M), standard deviation (SD) of brainstem responses to each stimulus in sub-groups with normal hearing................................................................. 144

Table 4.18 The $F$ (3, 36) ratio and p-values of MANOVA on brainstem responses to each stimulus in sub-groups with normal hearing................................................................. 145

Table 4.19 The mean (M), standard deviation (SD), t-value and p-value of independent samples t test on $F_0$ (in Hz) of FFR to /dɑ/ and /si/ stimulus, in the normal and clinical sub-groups................................. 148

Table 4.20 Mean (M) and standard deviation (SD) of $F_0$ energy and $F_1$ energy of FFR to each stimulus in sub-groups 'AB','C' and 'D' of group with normal hearing and clinical sub-group........... 151

Table 4.21 The t-value and p-value of independent samples t-test on $F_0$ energy and $F_1$ energy of FFR to both stimuli between normal and clinical sub-groups. ................................................................. 152

Table 4.22 Mean (M), standard deviation (SD), $\chi^2$ (3) and p-values of slope of N1-P2 (in $\mu$V/ms) to /dɑ/ stimulus in clinical sub-groups.................................................................................. 156

Table 4.23 Mean (M), standard deviation (SD,) t-value and p-value of independent samples t-test on slope of N1-P2 of LLR in normal hearing and clinical groups......................................................... 159

Table 4.24 Mean (M) and standard deviation (SD) of latency of ACC components in each clinical sub-groups. ................................................................. 162

Table 4.25 /U/ and the p values of Mann-Whitney U test on different sub-groups in onset and transition response of ACC......................... 163

Table 4.26 Mean (M) and standard deviation (SD) of latency of ACC components in sub-groups with normal hearing................................. 165

Table 4.27 Mean (M), standard deviation (SD), t-values and p-values of independent samples t-test on latencies of N1 and P2 in normal hearing group and clinical sub-groups......................... 168
Table 4.28  Mean (M), standard deviation (SD), t-values and p-values of independent samples t-test on 2 N1 and 2 P2 latencies in normal and clinical sub-groups ................................................. 169

Table 4.29  Mean (M) and standard deviation (SD) of amplitude of ACC in each clinical sub-groups .......................................................... 170

Table 4.30  The /U/ value and p-value of Mann-Whitney U test on onset and transition amplitudes of ACC ................................................. 171

Table 4.31  Mean (M) and standard deviation (SD) of amplitude of ACC components in sub-groups with normal hearing ......................... 173

Table 4.32  Mean (M), standard deviation (SD), t-values and p-values of independent samples t-test on N1 and P2 amplitudes (in μV) in normal and clinical sub-groups ................................................. 175

Table 4.33  Mean (M), standard deviation (SD), t-values and p-values of independent samples t-test on N1 and P2 amplitudes (in μV) in normal and clinical sub-groups ................................................. 175

Table 4.34  Mean (M), standard deviation (SD), t-value and p-value of independent samples t-test on 2P2 amplitude (in μV) in normal hearing and clinical groups .................................................. 177

Table 4.35  Mean and standard deviation of slope of V-A (in μV/ms) in each sub-group of GHP ................................................................. 179

Table 4.36  Mean and standard deviation of slope of V-A (in μV/ms) in each sub-group of PHP ................................................................. 179

Table 4.37  Mean (M), standard deviation (SD), /U/ value and p-value of Mann-Whitney U test on slope of V-A in good (GHP) and poor (PHP) hearing aid performers .............................................. 180

Table 4.38  Mean and standard deviation (SD) of F₀, F₀ energy and F₁ energy of FFR for /də/ and /si/ stimuli, in each sub-group of good hearing aid performers ......................................................... 181

Table 4.39  |U|-value and p-value of Mann-Whitney U test on F₀ energy and F₁ energy of FFR for /də/ and /si/ stimuli, in good hearing aid performers ................................................................. 182
Table 4.40  Mean and standard deviation (SD) of $F_0$, $F_0$ energy and $F_1$ energy of FFR for /ɖa/ and /si/ stimuli, in each sub-group of poor hearing aid performers........................................... 183

Table 4.41  The $|U|$-value and $p$-value of Mann-Whitney U test on $F_0$ energy and $F_1$ energy of FFR for both /ɖa/ and /si/ stimuli in poor hearing aid performers................................................. 184

Table 4.42  Mean, standard deviation, $U$, and $p$-value of Mann-Whitney U test for $F_0$ of FFR, for /ɖa/ and /si/ stimuli, between good and poor hearing aid performers.................................................. 185

Table 4.43  Mean and standard deviation of $F_0$ energy and $F_1$ energy of FFR for /ɖa/ and /si/ stimuli between good and poor hearing aid performers.......................................................... 187

Table 4.44  Mean and standard deviation (SD) of slope of N1-P2 (in $\mu$V/ms) in sub-groups of GHP.......................................................... 190

Table 4.45  Mean and standard deviation (SD) on slope of N1-P2 (in $\mu$V/ms) in sub-groups of PHP.......................................................... 191

Table 4.46  Mean and standard deviation (SD) of latency of ACC in each sub-group of good hearing aid performers................................. 192

Table 4.47  Mean and standard deviation (SD) of latency of ACC in each sub-group of poor hearing aid performers............................... 193

Table 4.48  $|U|$-value and $p$-value of Mann-Whitney U test on latencies of N1, P2 and 2N1 components of ACC in good hearing aid performers............................................................................. 193

Table 4.49  $|U|$-value and $p$-value of Mann-Whitney U test on latencies of N1, P2 and 2N1 components of ACC in poor hearing aid performers. ................................................................................... 194

Table 4.50  Mean and standard deviation (SD) of latency of ACC in good and poor hearing aid performers.................................................. 196

Table 4.51  Mean and standard deviation (SD) of amplitude of ACC in sub-groups of good hearing aid performers.................................................. 198

Table 4.52  Mean and standard deviation (SD) of amplitude of ACC in each sub-group of poor hearing aid performers............................. 198

Table 4.53  $|U|$-value and $p$-value of Mann-Whitney U test on amplitudes
of N1, P2 and 2N1 components of ACC in good hearing aid performers…………………………………………………………... 199

Table 4.54 |U|-value and p-value of Mann-Whitney U test on amplitude of N1, P2 and 2N1 components of ACC in poor hearing aid performers. ........................................................................................................ 200

Table 4.55 Mean and SD of amplitude of ACC components in sub-groups of GHP and PHP…………………………………………………………… 201
