List of Figures v
Abstract viii

1. Introduction 1
   1.1. Background 1
   1.2. Virulence factors
      1.2.1. Toxins 3
      1.2.2. Capsule 4
   1.3. S-layer 4
   1.4. Detection of Bacillus anthracis 5
   1.5. Vaccination 7

2. Literature survey 10
   2.1. Taxonomy and Genetic relatedness
   2.2. Bacillus anthracis as a biological weapon 11
   2.3. Anthrax outbreaks 12
   2.4. Pathogenicity 14
   2.5. Virulence factors
      2.5.1. Toxins
         2.5.1.1. Protective antigen 18
         2.5.1.2. Lethal factor 19
         2.5.1.3. Edema factor 19
      2.5.2. Capsule 20
   2.6. S-layer 21
   2.7. Detection methods
      2.7.1. Immunological Methods 23
      2.7.2. Nucleic acid methods 27
      2.7.3. Sensor and other methods 29
   2.8. Prophylaxis 30
3. **Materials and Methods**

3.1. Bacterial Strains, chemicals and media 36

3.2. Animal maintenance 36

3.3. Spore preparation 36

3.4. Spore disruption for extracting DNA 37

3.5. Cloning of rea1N and rea1C 38

3.6. Expression and purification of rEA1N and rEA1C 38

3.7. Generation of monoclonal antibodies against rEA1N and rEA1C 39

3.8. Production of polyclonal antibodies 40

3.9. Immunoassays of mAbs for their specificity

   3.9.1. Indirect plate ELISA 40

   3.9.2. SDS-PAGE 41

   3.9.3. Western blot 41

   3.9.4. Dot ELISA 42

   3.9.5. Sandwich ELISA 42

   3.9.6. Immuno PCR 43

3.10. Specificity testing of IPCR 44

   3.10.1. Neutralization Assay for specificity of mAbs 45

3.11. Sensitivity testing of IPCR 46

3.12. Spiking Studies 46

3.13. Construction of chimeric gene 47

3.14. Cloning, expression and purification of recombinant proteins

   PA4 and EA1C 48

3.15. Preparation of competent cells by CaCl₂ method 48

3.16. Transformation of ligation mixture/plasmid into competent cells 51

3.17. Screening of transformed cells by PCR 51

3.18. Expression studies of recombinant proteins 51

3.19. Purification of recombinant proteins 52

3.20. Production and purification of *Bacillus anthracis* toxins 53

3.21. Immunization of mice 53

3.22. Antibody titration 54

3.23. Antibody isotyping 54
3.24. Lymphocyte proliferation assay 55
3.25. Opsonophagocytic assays 55
3.26. In vitro toxin neutralization assays 56
3.27. Animal challenging studies
   3.27.1. Induction of edema in footpad 56
   3.27.2. Passive protection studies 56
3.28. Statistical analysis 57

4. Results
   4.1. Spore disruption methods 58
   4.2. EA1N and EA1C proteins expression and purification studies 59
   4.3. Generation of monoclonal antibodies 60
   4.4. Specificity of mAbs 60
   4.5. Sensitivity of Immunoassays 70
   4.6. Specificity of Immuno PCR 73
   4.7. Sensitivity of Immuno PCR 75
   4.8. Effect of other bacteria and environmental factors on Immuno PCR 76
   4.9. Construction of chimeric gene (pe) 79
   4.10. Humoral immune responses in mice immunized with recombinant proteins 79
   4.11. Cellular mediated immune response of mice immunized with recombinant proteins 81
   4.12. Effect of antisera against toxin challenge on cell lines 83
   4.13. Protective effects of antisera in mice against toxin challenge 83

5. Discussion 88
6. Summary 100
7. References 102
8. Composition of media, reagents and buffers used in the present study 120
9. List of Publications & Patents 126
