7. Future Scope:

- Herbal formulations can be prepared based on the efficacy and percentage of phytoconstituents in treatment of diabetes and its management.
- *Cassia absus* can be further investigated for the treatment of cataract, a major complication of diabetes.
- The toxicity profile of the plants can be used for designing preclinical and clinical studies.
- Inclusion of isolated phytoconstituents and their validation by HPTLC in Ayurvedic pharmacopoeia.
- A detailed pharmacological study can be carried out to understand underlying mechanism in treatment of diabetes.
