

# LIST OF TABLES

---

## CHAPTER 1

1.1: Country wise production of bast fibres .....	4
1.2: Country wise consumption of bast fibres .....	4
1.3: World production of various bast fibres during years 1991 to 2003.....	6
1.4: Chemical compositions of important vegetable fibres.....	13
1.5: Various elements present in grey flax.....	20
1.6: Physical properties of flax, ramie, and cotton fibres.....	26
1.7: Ranking of various bast fibres according to properties.....	26
1.8: Important enzymes used in textile wet processing.....	40

## CHAPTER 2

2.1: Detail specifications of the grey flax fabric.....	66
2.2: Specifications of various alkalis used .....	66
2.3: Details of chemicals used .....	67
2.4: Pretreatment conditions of flax fabric with sodium hydroxide.....	67
2.5: Pretreatment conditions of flax fabric with various alkalis.....	68
2.6: Absorbance (OD) of Methylene blue at different wavelengths.....	73
2.7: Absorbance (OD) of Methylene blue at different concentrations.....	73
2.8: Optical density of pure hemicellulose at different wavelengths.....	76
2.9: Optical density of pure hemicellulose at different concentrations.....	76
2.10: Optical density of pure pectin at different wavelengths.....	77
2.11: Optical density of pure pectin at different concentrations.....	77
2.12: Reaction conditions of flax fabric treatment with sodium hydroxide and calcium hydroxide for kinetic study .....	78
2.13: Effects of sodium hydroxide on pretreatment of flax fabric.....	82
2.14: pH and ORP values of sodium hydroxide treatment liquor.....	83

2.15: Effects of alkali 'B' (KOH) on pretreatment of flax fabric.....	84
2.16: Effects of alkali 'C' (Ba(OH) <sub>2</sub> ) on pretreatment of flax fabric.....	85
2.17: Effects of alkali 'D' (Ca(OH) <sub>2</sub> ) on pretreatment of flax fabric .....	85
2.18: Effects of alkali 'E' (Na <sub>2</sub> CO <sub>3</sub> ) on pretreatment of flax fabric .....	86
2.19: Effects of alkali 'F' (Na <sub>3</sub> PO <sub>4</sub> ) on pretreatment of flax fabric.....	86
2.20: Comparison of optimized pretreatment conditions of various alkalis.....	88
2.21: Lattice energy of various alkalis.....	90
2.22: Chemical compositions and physicochemical properties of optimal pretreated flax fabric (with various alkalis) .....	97
2.23: Ranking of various alkalis on pretreatment of flax fabric according to chemical constituents and properties .....	108
2.24: IR spectra band assignment.. .....	110
2.25: Hemicellulose and pectin contents in treated flax samples determined using spectral and chemical analysis .....	114
2.26: Percentage removal of total noncellulosics from flax by NaOH .....	116
2.27: Percentage removal of total noncellulosics from flax by Ca(OH) <sub>2</sub> .....	116
2.28: Percentage removal of hemicellulose from flax by NaOH.....	121
2.29: Percentage removal of hemicellulose from flax by Ca(OH) <sub>2</sub> .....	121
2.30: Percentage removal of pectin from flax by NaOH.....	124
2.31: Percentage removal of pectin from flax by Ca(OH) <sub>2</sub> .....	124
2.32: Half time (t <sub>1/2</sub> ) of removal of noncellulosics from flax by various alkalis .....	128
2.33: Rate constant <i>k</i> of alkaline reactions of flax with various alkalis .....	130
2.34: Activation energy of reactions of flax with various alkalis .....	135

### **CHAPTER 3**

3.1: Specifications of various aliphatic amines used.....	141
3.2: Conditions of pretreatment of flax with various amines.....	142
3.3: Effect of various amines on pretreatment of flax at temperature 50°C.....	144
3.4: Effect of various amines on pretreatment of flax at temperature 60°C.....	145
3.5: Effect of various amines on pretreatment of flax at temperature 70°C.....	146

3.6: Effect of various amines on pretreatment of flax at temperature 80°C.....	147
3.7: Chemical compositions of grey and amine pretreated flax fabrics.....	157
3.8: Properties of flax fabric pretreated with various amines .....	162
3.9: Band assignment in IR spectra of pure hemicellulose, pectin, residual liquor of NaOH, DEA, TEA and EA pretreatments.....	166

## **CHAPTER 4**

4.1: Details of enzymes and chemicals used.....	173
4.2: Conditions of enzymatic pretreatment of flax fabric.....	174
4.3: Peracetic acid pretreatment conditions for flax fabric.....	175
4.4: Effect of enzymatic pretreatment on weight loss of flax by enzyme E <sub>1</sub> .....	176
4.5: Effect of enzymatic pretreatment on weight loss of flax by enzyme E <sub>2</sub> .....	176
4.6: Effect of enzymatic pretreatment on weight loss of flax by enzyme E <sub>3</sub> .....	177
4.7: Effect of optimum enzymatic treatment conditions on weight loss of flax fabric.....	182
4.8: Effect of enzyme E <sub>1</sub> on various properties of flax fabric as a function of percent weight loss.....	183
4.9: Chemical compositions of flax fabric pretreated with enzyme E <sub>1</sub> .....	185
4.10: Chemical compositions and properties of grey and optimal pretreated flax fabric (with sodium hydroxide and enzymes).....	187
4.11: Effect of peracetic acid pretreatment on weight loss and whiteness index of flax at various process parameters.....	192
4.12: Chemical compositions and properties of grey and pretreated flax fabric (with sodium hydroxide and peracetic acid).....	201
4.13: IR spectra peaks of various samples.....	207

## **CHAPTER 5**

5.1: Characteristics of the flax fabric samples used .....	220
5.2: Specifications of soils used for the microbial-resistivity analysis.....	219
5.3: Thermo-analytical data of flax fabrics with different residual noncellulosic content.....	232

5.4: Thermo-analytical data of optimal pretreated flax fabrics with various systems.....	234
5.5: Effect of noncellulosics on refractive indices and related optical quantities of flax fabric samples.....	247
5.6: Effect of various pretreatments on refractive indices and related optical quantities of flax fabric samples.....	247
5.7: X-ray diffraction profile of various flax samples.....	250
5.8: Cuprammonium fluidity, DP and molecular weight of various flax samples of varying RNCC.....	258
5.9: Microbial - resistivity of various flax fabrics in different soils.....	259

## **CHAPTER 6**

6.1: Specifications of samples selected for dyeing .....	267
6.2: Characteristics of Direct dyes used .....	268
6.3: Characteristics of Reactive dyes used.....	269
6.4: Dyeing conditions of flax fabric with Direct dyes (D I, D II and D III).....	270
6.5: Dyeing conditions of flax fabric with Reactive dyes (Exhaust method).....	271
6.6: Dyeing conditions of flax fabric with Reactive dyes (Pad-dry-cure and pad-dry-steam methods) .....	271
6.7: Absorbance (OD) of direct dyes (D I, D II and D III) at different wavelengths (concentration = 10 mg/l).....	274
6.8: Colour strength (in terms of K/S values) of various flax samples dyed with dyes D I, D II and D III .....	279
6.9: Colour strength (K/S) of various flax samples with different residual noncellulosics dyed with dyes D I, D II and D III .....	286
6.10: Fastness properties of Direct dyes on flax fabric samples .....	288
6.11: Kinetic and thermodynamic constants of dyeing flax with direct dyes D I, D II and D III at various temperatures .....	291
6.12: Relationship between dye structure and kinetic constants .....	294
6.13: Colour strength (K/S values) of various flax samples dyed with dyes R I, R II and R III (Exhaust method) .....	297

6.14: Colour strength (K/S values) of various flax samples dyed with dyes R I, RII and R III (P-D-C method) .....	297
6.15: Colour strength (K/S values) of various flax samples dyed with dyes R I, RII and R III (P-D-S method) .....	297
6.16 Colour strength (K/S values) of various flax samples with different residual noncellulosics dyed with dyes R I, R II and R III (Exhaust process) .....	305
6.17 Colour strength (K/S values) of various flax samples with different residual noncellulosics dyed with dyes R I, R II <sub>2</sub> and R III (P-D-C process) .....	305
6.18 Colour strength (K/S values) of various flax samples with different residual noncellulosics dyed with dyes R I, R II and R III (P-D-S process) .....	305
6.19 Effect of residual noncellulosic components on fixation properties of various reactive dyes applied on flax by exhaust dyeing method .....	308
6.20 Effect of residual noncellulosic components on fixation properties of various reactive dyes applied on flax by P-D-C dyeing method .....	308
6.21 Effect of residual noncellulosic components on fixation properties of various reactive dyes applied on flax by P-D-S dyeing method .....	308
6.22 Fastness properties of Reactive dyes on flax fabric samples dyed by different method .....	314
