ACKNOWLEDGEMENT

It is difficult to express my gratitude to Prof. V.V. Modi for the invaluable guidance, constructive criticism and encouragement given during the course of this work. He has played an important role in moulding the course of my scientific thinking, for which I am highly indebted to him.

I thankfully acknowledge the receipt of research fellowships awarded by the Department of Science and Technology and the University Grants Commission.

I wish to thank all staff members and research colleagues of this department for their suggestions and criticism given from time to time, especially Dr. Gopa Majumdar.

It gives me pleasure to thank Miss Smita Kapila who has helped me immensely during the preparation of this thesis.

I also wish to thank Mr. Himanshu Parikh, Miss Bela Amin and Mr. Avinash Sattur for their help during the course of this study and Miss Prerna Reshamwala for help in the writing of this manuscript.

I thank Dr. A. Johnston and Dr. A. H. S. Onions of the Commonwealth Mycological Institute, U.K. for having kindly identified the mold isolated from mangoes.

Lastly, a word of thanks to Mr. H. S. Khatri for the neat and efficient typing of the thesis.

( V. A. PATEJWALA )
