ACKNOWLEDGEMENT

It gives me an immense pleasure to present this thesis as an outcome of the constant efforts taken for not less than three and half years. As this juncture, I feel proud privileged to have the opportunity to acknowledge to those who contributed directly or indirectly for the successful completion of this thesis. Words have never expressed human sentiments. This is only an attempt to express my gratitude which comes from my heart.

I am very grateful to Shri J. S. Naik, President, J. S. P. M., Pusad for building out such a fantastic infrastructure where it has been possible to complete this project successfully.

I am indebted to Dr. M. D. Kshirsagar, a mentor of this project, for his constant constructive criticisms. His unique abilities to analyze the things and also to apply the logical approach made this project flawless. His constant encouragements maintained the tempo of this work in rhythm throughout. His constant quest for knowledge and strive for excellence will always remain a source of inspiration to me. His parental love and affection will always be remembered.

"Thank you, sir" for all you have done.

I am also thankful to Prof. Dr. N. H. Indurwade for his ambitious efforts taken for completing the impossible task of starting the Ph. D. program in Pharmaceutical Sciences at S. N. Institute of Pharmacy, Pusad.

I owe my sincere thanks to Prof. R. N. Purohit, Principal, Anuradha College of Pharmacy, Chikhali for not only the advices and opinions he rendered to me but also for the constant encouragements which helped in my moral boosting. His contributions in constructing the chapter 5 of this thesis need worth mentioning.
I am also thankful to Prof. Avinash Wankhede, Head of the Department, Mechanical Engineering, B. N. C. E., Pusad for providing me the technical approach of machine designing. The tedious and complicated mathematical calculations involved in the machine designing have been possible only because of him.

I feel very proud to say that my student Mr. Arun Singh who along with the help of Shri Sai Engineering Works, M. I. D. C., Chimur, Chandrapur, completed the fabrication work following the instructions and help from drawings and model. I am very happy to see that the idea about the new principle of the pelletization was just in the mind which came into truth due to the team efforts where the contributions of Mr. Arun Singh were equal to the lion’s share.

It is next to impossible to pacify myself by saying the merely thanking words to my mother and father for what they have done and what they meant for me.

I am also not able to vote any thanks to my beloved wife, Ms. Vaishali, as she always stood behind me constantly encouraging and supporting with a strong and remarkable belief in the blessings of God. My two kids Shalaka and Prathamesh did not like their father ignoring them for the thing which meant nothing to them.

I am thankful to Dr. S. B. Jaiswal, Prof A. S. Pratapwar, Prof. R. S. Wanare, Mrs. V. S. Belgamwar, Mr. Aijaz Ahmed, Mr. U. M. Johari and to all those who have directly or indirectly assisted me in this work.

I am thankful to Mr. R. V. Bajad, librarian, S. N. I. O. P., Pusad for providing me the necessary books as and when required. I am also thankful to the laboratory staff Mr. K. J. Tute, Mr. B. N. Tatwewar, Mr. Z. M. Rathod and Mr. Jameel Baig for the helps they rendered to me during the laboratory work.

(P. S. KAWTIKWAR)
