5.3 T-Distribution of a) peak load and b) modulus of flat compression for different PU foams

5.4 Peak flat wise compression load of PU foam with variable density ratio

5.5 Modulus of flat wise compression for PU foam with variable density ratio (Flat wise compression)

5.6 T-Distribution of a) peak load and b) modulus of Edge compression for different PU foams

5.7 Peak edge compression load of PU foam with variable density ratio for edge compression

5.8 Young’s modulus of PU foam with variable density ratio for edge compression

5.9 T-Distribution of a) bending peak load and b) bending strength for different PU foams

5.10 Peak bending load of PU foam with variable density ratio

5.11 Bending strength of PU foam with variable density ratio

5.12 T-Distribution of a) Flame height, b) Extinguish time and b) Loss of weight for different PU foams

5.13 Flame length of PU foam with variable density ratio

5.14 Extinguish time of PU foam with variable density ratio

5.15 Loss of weight of PU foam with variable density ratio

5.16 T-Distribution of % of water absorption of different PUF exposed to immersion water

5.17 Water absorption as a function of duration of exposure for different density ratio foams

6.1 Typical stress–strain curve of jute and bamboo epoxy composites for different fiber orientation

6.2 Maximum tensile stress of jute and bamboo composites for different fibre orientation

6.3 Strain (%) at maximum strength for jute and bamboo composites for different fibre orientation

6.4 Young’s modulus of jute and bamboo composites for different fibre orientation

6.5 Typical bending stress–bending strain curve for jute and bamboo epoxy composites for different fiber orientation
