Acknowledgements

Shri M.N. Ramakrishna Pillai, my late grandfather, who was an eminent mathematician and an enlightened soul, has been my guru and guiding force throughout my life, and to him I dedicate this thesis. It was his great desire that I should pursue research and make some worthwhile contributions to the body of scientific knowledge, as he has done. I have tried to emulate him and to be worthy of his confidence.

Almost right from the start of my career, I got the opportunity to work under my thesis superior Dr. S. Dasgupta, former Deputy Director, VSSC who has been my mentor and my guide. Without his inspiration and constant encouragement, this thesis would not have been a reality. His ability to immediately get to the heart of a problem has proved a boon to me. He showed me different ways to approach a research problem and has steered the course of this work with his many useful comments. I am grateful to you, Sir.

Dr. K. Sivan, Group Director, Mission Synthesis and Simulation Group, has been kind enough to share his experiences in thesis writing and paper writing. His dedication and the efforts he put into his own Ph.D were an object lesson to me. He showed me the need to be persistent to achieve my goal, and inspired me to make a final push to bring my work to completion. He has also reviewed my work critically and given many useful suggestions. I am grateful to you, Sir.

Shri T. S. Balasubramaniam under whom I started my career, introduced me to the area of launch vehicle control, which is central to this thesis work. He also encouraged me to constantly look for better ways to solve each problem. I gratefully acknowledge his help. Shri. M. V. Dhekane, Group Head, Control and Guidance Design Group, under whom I had the opportunity to wrestle with a host of real life control problems has been a kindred spirit and a friend. I thank him for the many technical discussions and the support he has given me.

I was lucky enough to be associated with Dr. S. C. Gupta, former Director, VSSC in his capacity as Distinguished ISRO professor and the work carried out with him taught me many valuable lessons on how to proceed with a line of research. I place on record my deep felt gratitude to him.
I sincerely thank Dr. B. B. Das, Deputy Director, CGSE and Dr. Radhakrishnan, Director, VSSC for providing the support and necessary facilities to carry out this work. I also thank Dr. B. N. Suresh, Director, IIST for his support and encouragement.

I am grateful to Dr. U. P. Rajeev, VSSC, who has been kind enough to thoroughly review my work and give several useful suggestions which have been incorporated in the thesis. Smt. Savithri Amma, MSSG has been a faithful friend, providing constant moral and material support. She as well as Shri. Karthikeyan, Mission Synthesis and Simulation Group, have contributed immensely to bring the thesis to its final form. I sincerely thank both of them.

I am grateful to Smt. Jayalekshmi, CIG, who has motivated me to pursue a Ph.D course and has been following its course with interest. I also gratefully acknowledge the useful technical discussions held with Dr. Brinda V., VSSC, and Smt. S. Geetha, VSSC.

I also thank Dr. Ushakumari, Professor, College of Engineering, Trivandrum for the several useful suggestions on thesis preparation.

I wish to thank my husband, Pradeep, and children Poornima and Aravind, for tolerating the household compromises which I had to make for completing this thesis, and cooperating to the fullest extent. They have often prodded me to keep at it whenever my enthusiasm waned. My parents Vijayalekshmi Amma and Ramachandran Nair and my in-laws Visalam and Balakrishnan Nambiar have been most understanding and encouraging. I also thank Dr. Subhash for showing me by his single pointed concentration, the extent to which effort can be stretched to achieve a goal.

Finally, I thank God Almighty for enabling me to surmount all difficulties and to bring this work to completion.
