Acknowledgements

I thank my supervisors Professor M. C. Radhakrishna and Professor N. Rudraiah for enabling me to work with their departments as a part-time research scholar. They gave me a set of challenging problems and complete academic freedom to pursue their solutions. Professor Rudraiah provided me an access to the UGC Centre for Fluid Mechanics’ phenomenally rich library. The centre also allowed me to get tutored by serious researchers like Professor I. S. Shivakumara and Professor M. Venkatachalappa. Their incisive insights cleared my foggy thoughts too many times to recall. I thank them for their generous guidance.

I thank successive chairmen of the Physics department, Professors B. A. Kagali, R. V. Anvekar and Sharath Ananthamurthy for helping me with the procedure, critically reviewing my reports and encouraging me at all times.

Finally, I thank my family for supporting this endeavour for the past five years. It has been an immense pleasure to work on this thesis - I have enjoyed every moment of it and I thank all who made it happen.
