List of Figures

Figure 1: Schematic diagram showing electrophoresis and Western blotting ...............17
Figure 2: Nardostachys jatamansi DC Plant and rhizome ........................................27
Figure 3: Valeriana wallichii DC. Plants and Rhizome ............................................38
Figure 4: Withania somnifera Linn. Plant and Rhizome .............................................45
Figure 5: Incidence of Sleep disorder .........................................................................53
Figure 6: Neurotransmittion at synapse .....................................................................63
Figure 7: GABA receptor and ligand gated ion channel ................................................70
Figure 8: GABA-A receptor .......................................................................................70
Figure 9: subunits of GABA-A receptor ....................................................................70
Figure 10: GABA shunt Pathway ................................................................................71
Figure 11: Arrangement of Gel and Blot in transfer apparatus .....................................107
Figure 12: Rhizomes of Valeriana jatamansi ..............................................................111
Figure 13: T.S showing layers of rhizome ..................................................................112
Figure 14: Cork cells showing oil ................................................................................113
Figure 15: Parenchymateous cells showing Starch grains ..........................................113
Figure 16: cork cells with irregular wall ......................................................................113
Figure 17: Starch grains ..............................................................................................114
Figure 18: Xylem vessels with pitted and scalariform secondary wall thickenings .......114
Figure 19: Rhizome of Valeriana wallichii DC ............................................................115
Figure 20: T.S of Rhizome of Valeriana wallichii DC ..................................................116
Figure 21: T.S of rhizome showing vascular region .....................................................117
Figure 22: T.S of rhizome showing oil globules ..........................................................117
Figure 23: Fibers in powder drug Figure 24: Parenchymatous cells .............................118
Figure 25: Tick walled cork cells Figure 26: Starch grains in parenchymatous ells ....118
Figure 27: Rhizome of Withania somnifera Linn .........................................................119
Figure 28: T.S of Rhizome of Withania somnifera Linn ................................................120
Figure 29: Vessels Figure 30: Cork cells with irregular outlines ...................................121
Figure 31: Lignified thick walled fibers ......................................................................121
Figure 32: TLC of Valeriana jatamansi .....................................................................131
Figure 33: TLC plate before derivatization at 254 nm ................................................132
Figure 34: TLC plate before derivatization at 366 nm ................................................132
Figure 35: TLC plate after derivatization visible light ................................................132
Figure 36: TLC plate after derivatization in 366 nm .................................132
Figure 37: Overlay and track details at 366 nm before derivatization: Valeriana jatamansi (VJ) .........................................................................................133
Figure 38: TLC plate before derivatization at 254nm ................................140
Figure 39: TLC plate before derivatization at 366..................................................140
Figure 40: TLC plate after derivatization in visible light .................................140
Figure 41: TLC plate after derivatization at 366 nm ..............................................140
Figure 42: Overlay and track details at 366 nm after derivatization: ......................141
Figure 43: TLC plate before derivatization at 254nm......................................144
Figure 44: TLC plate after derivatization at 254nm ................................................144
Figure 45: TLC plate after derivatization in visible light ........................................145
Figure 46: Overlay graph for withanolide A for all four extracts of Withania somnifera (WS) and standard at 254 nm at Rf 0.7 ..................................................145
Figure 47: Sleep latency and sleep time for VJSME and VJSHE. .............................156
Figure 48: Sleep latency and sleep time for VWSME and VWSHE..........................158
Figure 49: Sleep latency and sleep time for WSSME...........................................159
Figure 50: GC-MS Chromatogram of VJSHE ..................................................................164
Figure 51: GC-MS Chromatogram of VJSHE treated plasma sample at 10 minute ......164
Figure 52: GC-MS Chromatogram of VJSHE treated plasma sample at 60 minute ......165
Figure 53: GC-MS Chromatogram of VJSHE treated plasma sample at 120 minute ......165
Figure 54: GC-MS Chromatogram of VJSME .............................................................168
Figure 55: GC-MS Chromatogram of VJSME treated plasma sample at 10 minute......168
Figure 56: GC-MS Chromatogram of VJSME treated plasma sample at 60 minutes ...169
Figure 57: GC-MS Chromatogram of VJSME treated plasma sample at 120 minutes .169
Figure 58: GC-MS Chromatogram of VJSME .............................................................172
Figure 59: GC-MS Chromatogram of VJSME treated plasma sample at 10 minute......172
Figure 60: GC-MS Chromatogram of VJSME treated plasma sample at 60 minute......173
Figure 61: GC-MS Chromatogram of VJSME treated plasma sample at 120 minute.....173
Figure 62: GC-MS Chromatogram of VWSME .............................................................176
Figure 63: GC-MS Chromatogram of VWSME treated plasma sample at 10 minute ...176
Figure 64: GC-MS Chromatogram of VWSME treated plasma sample at 60 minute ....177
Figure 65: GC-MS Chromatogram of VWSME treated plasma sample at 120 minute ..177
Figure 66: GC-MS Chromatogram of control/blank plasma sample.........................178
Figure 67: linearity graph for withaferin A.................................................................179
Figure 68: chromatogram of withaferin A in spiked plasma
Figure 69: Bands of Withaferin A on TLC plate
Figure 70: Mean plasma concentration versus time curve for withaferin A
Figure 71: HPTLC chromatogram of GABA
Figure 72: HPTLC chromatogram of GABA in brain sample
Figure 73: Bands of GABA in linearity on TLC Plate
Figure 74: Calibration plot for GABA
Figure 75: Chromatogram of GABA in linearity
Figure 76: Chromatogram of GABA in brain homogenate along with stander
Figure 77: The level of GABA in brain homogenate for Valeriana jatamansi (VJ)
Figure 78: TLC plate showing test samples and std. GABA for Valeriana jatamansi (VJ) Representative pic
Figure 79: Chromatogram showing test samples and std. GABA for Valeriana jatamansi (VJ) Representative pic
Figure 80: The level of GABA in brain homogenate for Valeriana wallichii DC (VW)
Figure 81: TLC plate showing test samples and std. GABA Valeriana wallichii DC (VW) Representative pic
Figure 82: Chromatogram showing test samples and std GABA for Valeriana wallichii DC (VW) Representative pic
Figure 83: The levels of GABA in brain homogenate for Withania somnifera Linn
Figure 84: Chromatogram showing test samples and std GABA for Withania somnifera Linn (WS) Representative pic
Figure 85: HPTLC chromatogram of L- Glutamic acid Std.
Figure 86: HPTLC chromatogram of L- Glutamic acid in brain homogenate.
Figure 87: TLC plate showing test sample std. GABA and L- Glutamic acid
Figure 88: Simultaneous estimation of GABA and L- Glutamic acid after oral administration of VJSME.
Figure 89: Simultaneous estimation of GABA and L- Glutamic acid after oral administration of VJSHE.
Figure 90: Simultaneous estimation of GABA and L- Glutamic acid after oral administration of VWSME.
Figure 91: Simultaneous estimation of GABA and L- Glutamic acid after oral administration of VWSHE.
Figure 92: Simultaneous estimation of GABA and L-Glutamic acid after oral administration of VWSME.

Figure 93: Linearity graph for BSA.

Figure 94: Representative dot blot picture.

Figure 95: Western blot of test sample using DAB.

Figure 96: Expression of GABAA α1 subunit for VJSME, VJSHE, VWSME and VWSHE.

Figure 97: Western blots of GABA-A α1 subunits (TMB).

Figure 99: Effect of Valeriana jatamansi (VJ) on GABAA receptor α-1 subunit in mice brain homogenate (TMB).

Figure 100: Western blots of GABA-A α1.

Figure 101: Western blots of β-Actin.

Figure 102: Expression of GABA-A α1 & β-Actin.

Figure 103: Effect of Withania somnifera methanolic extract on GABAA receptor α-1 subunit (TMB).

Figure 104: Nitrocellulose membrane stained with Ponceau Stain.

Figure 105: Western blots of A,GABA-A α1 subunits (ECL).

Figure 106: Western blots of β-Actin as loading control developed using ECL.

Figure 107: Relative density of treated samples with respect to positive control.

Figure 108: Expression of GABA-A α1 & β-Actin, developed using ECL.

Figure 109: Expression of α1 subunit in brain homogenate for Valeriana wallichii DC (VW) (ECL).

Figure 110: Western blots for Withania somnifera Linn (WS)(ECL).

Figure 111: Effect of Withania somnifera methanolic extract on GABAA receptor α-1 subunit (ECL).
