ACKNOWLEDGEMENTS

It is my pleasure to acknowledge the gratitude towards those who have helped me in my work directly or indirectly during my doctoral study period.

Research means to develop the ability of independent, innovative and creative thinking which was inculcated in my mind by my mentor, adviser and most ideal person Prof. A. V. R. L. Narasimhacharya. He had been always with me since the days of my M.Sc. Dissertation. His encouragement and constructive criticism helped me a lot during the course of my doctoral research work. His passion for perfection in English, improved my linguistic skills. I learnt the importance of perfect, precise and ornamental usage of the language while writing which is eventually required for a true researcher. We had been discussing various aspects of sciences and that's how my journey of research went on and those discussions helped me become researcher and narrator. I am indebted and thankful to him for believing me and my work. He had been a good listener and always showed happiness and eagerness to teach new things.

I would like to thank the Head of the Department Prof. (Mrs.) Kiran Kalia, Prof. K. S. Rao, former Head of the Department for providing the necessary facilities throughout my research work. I express my sincere thanks to Dr. (Mrs.) Sujata S. Bhatt, who was always ready to help me and supported me from the time I joined this department for my Post graduate program. I would like to express my sincere gratitude and deep appreciation to Dr. A. S. Reddy, the major-advisor of plant identification. I am thankful to Aum Agri Industries, Baroda for their help in star fruit powder preparation.

I have a great sense of feelings toward the Department of Biosciences, Sardar Patel University. When I joined the department, it was altogether a new working place and atmosphere, but the Department has given me identity, made me a competent researcher in my life. I am thankful to the Department for giving me the platform which is required for building a strong career.
The financial support of the University Grants Commission, New Delhi, India is gratefully acknowledged for providing me a Research Fellowship for Meritorious Students in Sciences during the tenure of my research work.

Most important of all, with great pleasure I would like to express deep sense of gratitude to my parents Ashokbhai M. Vasant and Sarojben A. Vasant for their love, support and encouragement. With their blessings and constant motivation I could successfully achieve my goals. I would like to thank my younger brother Dhaval for always being a constant support for me.

I would like to thank my research colleagues for their suggestions and helping attitude towards me.

No words are enough for the sacrifice of rats (Charles foster) who devoted their lives for the betterment and development of science. They will be in my memory, forever and ever.

I am especially thankful to Mr. Ranjit Rathva for his help in maintenance of the animal house facility. He was always ready to support me in the arrangements. Without his help, this study would never be as smooth as it was.

Last but not least I thank ALMIGHTY for giving me patience and strength to overcome the difficulties leading to successful completion of my doctoral work.

Rupal A. Vasant
