Contents

Chapter 1: Introduction

- Complementary and alternative medicine- background and impact on modern medicine
- Homeopathy: gene expression and modulation
- Role of model organisms in hypothesis driven scientific research
- In vitro human cervical cancer cell line HeLa as a model to study gene expression and modulation
- Epigenetic modifications
- In vitro human cervical cancer cell line HeLa as human papilloma virus-18 (HPV-18) positive model to study epigenetic modification
- In vitro bacteriophage phiX174 (ФX174) as a model to study gene expression and modulation
- Bacteriophage phiX174 (ФX174) gene regulatory systems

Chapter 2: Literature review

- Part A-Molecular approaches towards development of purified natural products and their structurally known derivatives as efficient anti-cancer drugs: Current trends
- Part B-Strategies of molecular interventions with some medicinal plant products: oxidative stress and cancer prevention

Chapter 3: Ethanolic extract of the Goldenseal, Hydrastis canadensis, has demonstrable chemopreventive effects on HeLa cells in vitro: Drug-DNA interaction with calf thymus DNA as target

- Background
- Introduction
- Materials and methods
- Results
- Discussion
Chapter 4: Berberine modulates epigenetic modifications, disrupts microtubule network, and interacts with HPV-18E6-E7 oncoproteins by targeting p53 in cervical cancer cell HeLa: a mechanistic study including molecular docking

- Background
- Introduction
- Materials and methods
- Results
- Discussion

Chapter 5: Palmatine mediated DNA damage responses in HeLa cells in vitro and pharmacological drug target prediction in silico: role of histone proteins, tumor suppressor p53 and transcription factor NFκβ

- Background
- Introduction
- Materials and methods
- Results
- Discussion

Chapter 6: Evidence in support of gene regulatory hypothesis: Gene expression profiling manifests homeopathy effect as more than placebo

- Background
- Introduction
- Materials and methods
- Results
- Discussion

Chapter 7: Phenotypic evidence of ultra-highly diluted homeopathic remedies acting at gene expression level: a novel probe on experimental phage infectivity in bacteria

- Background
- Introduction
- Materials and methods
- Results
- Discussion
