ACKNOWLEDGEMENTS

I wish to take this opportunity of expressing my deep sense of gratitude to Professor T.A. Venkitasubramanian, Head of the Department of Biochemistry, Vallabhbhai Patel Chest Institute, Delhi-7, under whose inspiring guidance I had the privilege of working at this problem. His kind encouragement and wise counsel sustained me through the many difficulties that I encountered in the course of my study.

I am no less grateful to Dr. P. Suryanarayana Murthy, Reader in Biochemistry, for his readiness to help me with valuable suggestions and constructive criticism at every stage of my work. Without his unceasing attention to the minutest detail of my study it could hardly have been completed within the prescribed period.

My most sincere thanks are due to Dr. K. Santhanam, Senior Research Officer, for his help whenever I needed it.

I am deeply indebted to my respected teacher, Professor A.M. Siddiqui, Head of the Department of Biochemistry Aligarh Muslim University, Aligarh, for his very kind and most encouraging attitude towards me.

A special mention has to be made of Dr. V.C. Vora, Assistant Director, Fermentation Technology, Central Drug
Research Institute, Lucknow, for his kindness and consideration showed to me in the course of this study.

Last but not the least I most gratefully acknowledge the constant help and cooperation extended to me by Mrs. Jayanthi Bai at every stage of my work. I offer my warmest and most sincere thanks to all my colleagues and the entire staff of Biochemistry Department of V.P. Chest Institute, for their help and encouragement and to Mr. H.P. Paul for his efficient and conscientious typing.

Financial grant from Indian Council of Medical Research, New Delhi for a research fellowship supported, in part by PL-480 grant (No. FG-In-336), was an invaluable prop to me in overcoming the material difficulties in my way and deserves my deepest gratitude.
