List of Tables

Table 1 Breakup of the sample.................................................................131

Table 2 Chi square test for association between birth order of
conduct disorder and normal children...........................................161

Table 3 Chi square test for association between socio-economic
status of conduct disorder and normal children.........................163

Table 4 Chi square test for association between family type of
conduct disorder and normal children........................................166

Table 5 Chi square test for association between place of residence of
conduct disorder and normal children.......................................168

Table 6 Chi square test for association between mother’s education of
conduct disorder and normal children......................................170

Table 7 Chi square test for association between father’s education of
conduct disorder and normal children......................................172

Table 8 Chi square test for association between mother’s occupation of
conduct disorder and normal children......................................175
Table 9  Chi square test for association between father’s occupation of
candid disorder and normal children……………………………………177

Table10  Chi-square test for association between participation of
extracurricular activities of conduct disorder and normal children……181

Table 11 Chi square test for association between school attendance of
conduct disorder and normal children…………………………………….183

Table 12 Chi square test for association between school performance of
conduct disorder and normal children…………………………………….185

Table 13  Chi square test for association among two groups (conduct disorder and
normal children) and history of mental illness in the family……………188

Table 15 Chi square test for association among two groups (conduct disorder and
normal children) and habit of smoking…………………………………….191

Table 16 Chi square test for association among two groups (conduct disorder and
normal children) and habit of smoking in the family……………………193

Table 17 Chi square test for association among two groups (conduct disorder and
normal children) and drug abuse………………………………………..194
Table 18  Chi square test for association among two groups (conduct disorder and normal children) and dysfunctional family……………………………196

Table 19  Chi-square test of age and alcohol consumption of conduct disorder children…………………………200

Table 20  Chi-square test of age and smoking of conduct disorder children…………202

Table 21  Chi-square test of age and drug abuse of conduct disorder children……203

Table 22  Chi-square test of gender and history of mental illness in the family of conduct disorder children………………………………………………205

Table 23  Chi-square test of gender and smoking in the family of conduct disorder children…………………………………………………………207

Table 24  Chi-square test of gender and dysfunctional family of conduct disorder children……………………………………………………………………208

Table 25  Chi-square test of birth order and consumption of alcohol………………210

Table 26  Chi-square test of birth order and smoking………………………………212

Table 27  Chi-square test of birth order and drug abuse……………………………214

Table 28  Chi-square test of socio-economic status and history of mental illness in the family ……………………………………………………………216

Table 29  Chi-square test of socio-economic status and alcohol consumption……..217
Table 30   Chi-square test of socio-economic status and smoking………………..219
Table 31   Chi-square test of socio-economic status and smoking in the family……220
Table 32   Chi-square test of Socio-economic status and drug abuse………………222
Table 33   Chi-square test of socio-economic status and dysfunctional family……223
Table 34   Chi-square test of family type and history of mental illness………………226
Table 35   Chi-square test of family type and consumption of alcohol…………….228
Table 37   Chi-square test of family type and smoking in the family………………231
Table 38   Chi-square test of family type and drug abuse…………………………232
Table 40   Chi-square test of place of residence and history of mental illness in the family……………….237
Table 41   Chi-square test of place of residence and alcohol consumption…………239
Table 42   Chi-square test of place of residence and smoking ……………………..240
Table 43   Chi-square test of place of residence and smoking in the family………242
Table 44   Chi-square test of place of residence and drug abuse……………………244
Table 45   Chi-square test of place of residence and dysfunctional family………245
Table 46   Comparison of the mean scores in home environment obtained by the conduct disorder and normal children…………………………248
Table 47    Comparison of the mean scores in coping obtained by the
conduct disorder and normal children ........................................253

Table 48    Comparison of the mean scores in personality obtained by the
conduct disorder and normal children ........................................256

Table 49    Comparison of the mean scores in personality obtained by the
conduct disorder and normal children ........................................259

Table 50    Comparison of the mean scores in home environment
obtained by the childhood and adolescent onset types

of conduct disorder children.....................................................264

Table 51    Comparison of the mean scores in coping
obtained by the childhood and adolescent onset types

of conduct disorder children .....................................................266

Table 52    Comparison of the mean scores in personality
obtained by the childhood and adolescent onset types

of conduct disorder children .....................................................267
Table 53  Comparison of the mean scores in adjustment

obtained by the childhood and adolescent onset types

of conduct disorder children ………………………………………268

Table 54  Comparison of the mean scores in home environment

obtained by the male and the femalen conduct disorder children……271

Table 55  Comparison of the mean scores in coping obtained by the

male and the female conduct disorder children ..................275

Table 56  Comparison of the mean scores in personality obtained

by the male and the female conduct disorder children ..........277

Table 57  Comparison of the mean scores in adjustment obtained

by the male and the female conduct disorder children ...........279

Table 58  Comparison of the mean scores in home environment

obtained by the dropouts and the school going CD children.........282

Table 59  Comparison of the mean scores in coping obtained

by the dropouts and the school going CD children .............284

Table 60  Comparison of the mean scores in personality obtained
by the dropouts and the school going CD children .............. 285

Table 61  Comparison of the mean scores in adjustment obtained
          by the dropouts and the school going CD children .......... 287

Table 62  The coefficients of correlation obtained between
          home environment and coping ................................. 290

Table 63  The coefficients of correlation obtained between
          personality and home environment............................. 293

Table 64  The coefficients of correlation obtained between.
          home environment and adjustment.............................. 296

Table 65  The coefficients of correlation obtained between
          coping and personality............................................. 301

Table 66  The coefficients of correlation obtained between
          the coping and adjustment......................................... 307

Table 67  The coefficients of correlation obtained between
          personality variables and adjustment............................ 308
