

CONTENTS

	Page No.
I. INTRODUCTION	1-28
II. MATERIALS AND METHODS	
PCLSV-CVB ISOLATE	29-67
Collection, establishment and maintenance	
Growing of test plants	
Host range	
Transmission	
Sap transmission	
Seed transmission	
Grow-out tests	
Detection of virus in groundnut seeds	
Aphid transmission	
Physical properties	
Dilution end point	
Thermal inactivation point	
Longevity <u>in vitro</u>	
Effect of buffers and organic solvents on virus infectivity	
Virus purification	
Infectivity assay	
Quantitation of purified virus	
UV absorption characteristics	
Electron microscopy	
Serology	
Production of antiserum	
Cross absorption of antiserum	
Antiserum titre	
Serological relationships	
Agarose gel double diffusion test	
Enzyme-linked immunosorbent assay	
Preparation of reagents	
Purification of immunoglobulins	

- Conjugation of alkaline phosphatase to immunoglobulins
 - DAC-ELISA
 - DAS-ELISA
- Virus coat protein
 - Molecular weight determination
- Electro-blot immunoassay
- Virus nucleic acid
 - Isolation from purified virus
 - Isolation from infected leaves
 - Infectivity assay
 - Nucleic acid type
 - Per cent nucleic acid
 - Nucleic acid strandedness
- Agarose gel electrophoresis of viral DNA
- Restriction enzyme mapping of PCLSV-CVB DNA
 - Setting of digestions with restriction enzymes
 - Elution of Bam HI/Eco RI digested DNA fragments from agarose gel.
 - Digestion of eluted DNA with Bgl II
- Heat denaturation of PCLSV-CVB DNA
- Molecular cloning of PCLSV-CVB DNA into pUC 118 plasmid vector
 - Ligation
 - Transformation
 - Extraction of recombinant plasmid DNA
 - Restriction enzyme digestion of recombinant plasmid DNA
 - Infectivity assay of recombinant DNA
- Groundnut field surveys
- Varietal reactions
- Growth and yield
- Chemical composition of seeds

PGMV ISOLATES

67-75

Collection, establishment and maintenance of
potyvirus isolates
Growing of test plants
Host range
Transmission
 Sap transmission
 Seed transmission
 Grow-out tests
 Detection of virus in groundnut seeds
 Aphid transmission
Physical properties
Virus purification
 Infectivity assay
 Quantitation
 UV light absorption characteristics
Electron microscopy
Serological relationships
Virus protein-molecular weight determination
Determination of virus concentration
Estimation of chlorophyll
Growth and yield
Chemical composition of seeds

III	RESULTS	76-101
	PCLSV-CVB Isolate	
	PGMV -Isolates	
IV	DISCUSSION	102-132
V	SUMMARY AND CONCLUSIONS	133-141
