ACKNOWLEDGEMENT

The author expresses his profound sense of gratitude to the research supervisor, Dr. A.R. Santhakumar, Professor of Structural Engineering, College of Engineering, Anna University, for his keen interest and valuable, unhesitating and expert guidance given from the inception to the completion of this research work. The author is indebted to the joint research supervisor, Dr. A.G. Madhava Rao, Deputy Director, Structural Engineering Research Centre (SERC), Madras, for his untiring support and, for providing all the required facilities of the Fatigue Testing Laboratory and invaluable guidance during the course of this research work.

The author places on record his deep sense of gratitude to Mr. N.V. Raman, Director, SERC, Madras, a national laboratory under the Council of Scientific & Industrial Research, for permission to carry out the research programme and for providing necessary facilities, financial support and encouragement to complete the research programme. The help rendered by the technical staff of the Fatigue Testing Laboratory in carrying out the experimental work is acknowledged. The author thanks his colleagues, Dr. S. Seetharaman, M/s. P. Gandhi and D.S. Sreedhar who helped in different ways during the various stages of this work.

The author wishes to thank the Vice-Chancellor and the authorities of the Anna University, Madras, and the authorities of College of Engineering, Guindy, for providing necessary facilities towards completion of the research programme. Finally, thanks to wife Nirmala and children Krithika and Pranesh for being so patient with him the last few years.
