ACKNOWLEDGEMENT

The author expresses his sincere gratitude to his research supervisor Dr. A.R. Santhakumar, Professor of Structural Engineering and Dean (Civil), Anna University, Chennai 600 025 for his unstinted cooperation, keen interest, constant encouragement, expert guidance, deep sense of appreciation on original contribution and for all his help during the entire period of the research programme culminating in the successful completion of this thesis.

The author is grateful enough and indebted to his joint research supervisor Dr. A.G. Madhava Rao, Emeritus Scientist, Structural Engineering Research Centre, Madras, Chennai 600 113 for suggesting the area of the research, offering him to carry out the experimental investigations in the Fatigue Testing Laboratory, his expert guidance and valuable suggestions during the entire programme of this research work.

The author would like to place on record his sincere gratitudes to Mr. N.V. Raman, former Director and to Dr. T.V.S.R. Appa Rao, Director, Structural Engineering Research Centre, Madras for granting him permission to pursue his Ph.D. programme at the Anna University, Chennai 600 025 and for allowing him to make use of the laboratory and other facilities to carry out the research works required in connection with this thesis.

The author would like to thank the doctoral committee members, Dr. C. Ganapathy, Professor, IIT, Madras; Dr. R. Narayanan, Deputy Director, Structural Engineering Research Centre, Madras; and Dr. S.C. Natesan,
Asst. Professor, P.S.G. College of Technology, Coimbatore; for their keen interest and guidance right from the inception of this programme till its end.

The author thanks all the faculty members of the Structural Engineering Division, Anna University for their interest in the research work and for helping him in various ways.

Thanks are also due to the Vice-Chancellor, Anna University for permitting the author to register for the research programme and to make use of all the facilities of the university to carry out the research work.

The author expresses his gratitudes to his colleagues Mr. M. Neelamegam and Dr. J.K. Dattatreya, for their fruitful discussions, valuable suggestions, and for all their help on the material development required in connection with the research work.

Thanks are due to all the technical staff of the Concrete Composite Laboratory, Fatigue Testing Laboratory, Heavy Testing Laboratory, and Construction Engineering Laboratory of the Structural Engineering Research Centre, Madras for rendering necessary assistance to the author in carrying out various works connected with the thesis. In particular the author would like to express his sincere gratitudes and appreciations to Mr. C. Govindarajan, Concrete Composite Laboratory and Mr. A. Kannan, Fatigue Testing Laboratory for their dedicated service especially in connection with the works related to the repairing of the joints. Thanks are also due to Mr. E. Jayakumar for taking photographs of the various experimental works. Thanks are also due to Mr. R. Bhaskaran and Mrs. Latha Balasundar of Drawing Office for all their help in the preparation of figures and drawings required for this thesis.

T.S. Thandavamoorthy
