

LIST OF FIGURES

FIGURE NO.	TITLE	PAGE NO.
1.1	Band gap energies for various semiconductors in aqueous electrolytes at pH 1	7
1.2	Illustration of major processes occurring on a semiconductor particle following electronic excitation	8
3.1	Effect of pH on the adsorption of direct red 31	19
3.2	Effect of adsorbent dose on the adsorption of direct red 31	21
3.3	Effect of adsorbent dose on the percentage removal of direct red 31	22
3.4	Effect of concentration on the adsorption of direct red 31	23
3.5	Lagergren plot for the adsorption of direct red 31	26
3.6	Langmuir adsorption isotherm for adsorption of direct red 31	26
3.7	Effect of temperature on the adsorption of direct red 31	31
3.8	Effect of pH on the adsorption of salicylic acid	33
3.9	Effect of adsorbent dose on the adsorption of salicylic acid	34

FIGURE NO.	TITLE	PAGE NO.
3.10	Effect of adsorbent dose on the percentage removal of salicylic acid	35
3.11	Effect of concentration on the adsorption of salicylic acid	37
3.12	Lgergren plot for the adsorption of salicylic acid	38
3.13	Langmuir adsorption isotherm for adsorption of salicylic acid	40
3.14	Effect of temperature on the adsorption of salicylic acid	42
4.1	Photodegradability of direct red 31	48
4.2	Effect of different catalysts on the photodegradability of direct red 31	52
4.3a	Effect of pH on the photocatalytic degradation of direct red 31	54
4.3b	Effect of pH on the initial rate of photocatalytic degradation of direct red 31	54
4.4a	Effect of catalyst weight on the photocatalytic degradation of direct red 31	57
4.4b	Effect of catalyst weight on the initial rate of photocatalytic degradation of direct red 31	57
4.5a	Effect of dye concentration on the photocatalytic degradation of direct red 31	60
4.5b	Effect of dye concentration on the initial rate of photocatalytic degradation of direct red 31	60

FIGURE NO.	TITLE	PAGE NO.
4.6	Plot of $\log C_0/C$ versus time for direct red 31	63
4.7a	Plot of $1/r$ versus $1/C$ for direct red 31	64
4.7b	Plot of $t_{0.5}$ versus $0.5 C$ for direct red 31	66
4.8	Effect of addition of hydrogen peroxide on the rate of photocatalytic degradation of direct red 31	71
4.9	Effect of addition of isopropyl alcohol on the rate of photocatalytic degradation of direct red 31	73
4.10a	Effect of pH on the solar photocatalytic degradation of direct red 31	76
4.10b	Effect of pH on the initial rate of solar photocatalytic degradation of direct red 31	76
4.11a	Effect of catalyst weight on the solar photocatalytic degradation of direct red 31	79
4.11b	Effect of catalyst weight on the initial rate of solar photocatalytic degradation of direct red 31	79
4.12a	Effect of dye concentration on the solar photocatalytic degradation of direct red 31	81
4.12b	Effect of dye concentration on the initial rate of solar photocatalytic degradation of direct red 31	81
4.13a	Effect of pH on the photocatalytic degradation of direct red 31 in the presence of ZnS	84
4.13b	Effect of pH on the initial rate of photocatalytic degradation of direct red 31 in the presence of ZnS	84

FIGURE NO.	TITLE	PAGE NO.
4.14a	Effect of catalyst weight on the photocatalytic degradation of direct red 31 in the presence of ZnS	86
4.14b	Effect of catalyst weight on the initial rate of photocatalytic degradation of direct red 31 in the presence of ZnS	86
4.15a	Effect of dye concentration on the photocatalytic degradation of direct red 31 in the presence of ZnS	89
4.15b	Effect of dye concentration on the initial rate of photocatalytic degradation of direct red 31 in the presence of ZnS	89
4.16	Plot of $\log C_0/C$ versus time for direct red 31 in the presence of ZnS	91
4.17	Photodegradability of direct yellow 12	94
4.18a	Effect of pH on the photocatalytic degradation of direct yellow 12	97
4.18b	Effect of pH on the initial rate of photocatalytic degradation of direct yellow 12	97
4.19a	Effect of catalyst weight on the photocatalytic degradation of direct yellow 12	99
4.19b	Effect of catalyst weight on the initial rate of photocatalytic degradation of direct yellow 12	99
4.20a	Effect of dye concentration on the photocatalytic degradation of direct yellow 12	102
4.20b	Effect of dye concentration on the initial rate of photocatalytic degradation of direct yellow 12	102
4.21	Plot of $\log C_0/C$ versus time for direct yellow 12	104

FIGURE NO.	TITLE	PAGE NO.
4.22	Photodegradability of acid black 52	107
4.23a	Effect of pH on the photocatalytic degradation of acid black 52	110
4.23b	Effect of pH on the initial rate of photocatalytic degradation of acid black 52	110
4.24a	Effect of catalyst weight on the photocatalytic degradation of acid black 52	112
4.24b	Effect of catalyst weight on the initial rate of photocatalytic degradation of acid black 52	112
4.25a	Effect of dye concentration on the photocatalytic degradation of acid black 52	115
4.25b	Effect of dye concentration on the initial rate of photocatalytic degradation of acid black 52	115
4.26	Plot of $\log C_0/C$ versus time for acid black 52	117
4.27	Photodegradability of salicylic acid	120
4.28a	Effect of pH on the photocatalytic degradation of salicylic acid	122
4.28b	Effect of pH on the initial rate of photocatalytic degradation of salicylic acid	122
4.29a	Effect of catalyst weight on the photocatalytic degradation of salicylic acid	125
4.29b	Effect of catalyst weight on the initial rate of photocatalytic degradation of salicylic acid	125

FIGURE NO.	TITLE	PAGE NO.
4.30a	Effect of concentration on the photocatalytic degradation of salicylic acid	127
4.30b	Effect of dye concentration on the initial rate of photocatalytic degradation of salicylic acid	127
4.31	Plot of $\log C_0/C$ versus time for salicylic acid	130
4.32a	Plot of $1/r$ versus $1/c$ for salicylic acid	132
4.32b	Plot of $t_{0.5}$ versus $0.5C$ for salicylic acid	132
