ACKNOWLEDGEMENTS

In submitting this dissertation I owe my deep sense of gratitude for the advice, constant encouragement, guidance and animation provided to me by Professor S.M. Shah, Head, Department of Statistics, Sardar Patel University, Vallabh Vidyanagar. It is difficult to find words to express for the valuable guidance and unfailing inspiration I received from him throughout my research work. In spite of his heavy engagements, he was always prompt to give response to my queries and academic difficulties, this I deeply appreciate.

I cannot forget to pay my gratitude to Dr. R.N. Pandey, Reader, Department of Statistics, Banaras Hindu University with whom I had many useful discussions and encouragements at various stages in my research work. He was a source of inspiration throughout this study.

I thank Dr. Umesh Singh, Reader, Department of Statistics, Banaras Hindu University for useful discussions. I sincerely thank the staff members and system analyst of the computer Centre, Banaras Hindu University in helping me to carry out the calculations needed in the investigation.
I will be failing in my duty if I do not pay my sincere regards to the Principal, Harish Chandra Post-Graduate College, Varanasi and my colleagues of the Statistics department who encouraged me from time to time. I also thank Shri R.S. Paney for the timely and excellent typing of the thesis.

I am greatly indebted to my parents who always encouraged me and played a very significant role in what I have been able to accomplish.

October, 1987. Rakesh Srivastava
