ACKNOWLEDGEMENT

We live in the world that is fast changing—a world in which population explosion, decolorization and the professional, economic and social transformation, resulting from technological development are many forces making for the modernization of education; at the same time acceleration of scientific programme is resulting in the more rapid growth of knowledge. It is a question for education to decide about training teachers for the society of tomorrow, retraining the teachers of today to keep them abreast of the time in accordance with some predetermined scheme of structure, needs and ideas.

Most of the things require scientific study and most of the studies require many factors, literature, effort as well as guidance.

Great part of debt for the present study is due to my guide, Dr J.M. Bhatt without whose inspiration, encouragement and guidance, it would not have been possible for me to complete this task. He devoted considerable time in carefully going through the manuscript before approaching in its final form. I was able to structure through dialogues with him the format of ideas, which I found amply useful in developing this study. His erudition, dynamic originality of ideas and love for profession have always been a guiding star for me.

My great thanks are also due to Dr C.C. Pathak who has been kind enough to give me every opportunity to benefit from his experiences in experimental design in education. He also continually fed me with wide cover of research ideas, and always remained very much concerned with the completion of this study.

I have an unpayable debt of gratitude to:
- Dr B.V. Patel, Principal and Head of Education
Department Sardar Patel University;
- Dr C.B. Patyal, Dean of the Faculty of Education
- Dr S.P. Kulshretha, Head of Research Division of
  Teacher Education Department D.A.V. College of
  Education Dehradoon,
with whom I had the privilege of being associated and guided.
All of them gave me numerous opportunities of discussion and
deliberation to deepen my understanding in the field.

Special mention should be made of the exceptional
opportunities given to me by Department of Teacher Training
of Thailand, Civil Service Commission, Bangkok, Educational
Counsellor Royal Thai Embassy New Delhi, for my study in
India and providing me with official encouragement and financial
help during my stay in India. But for their kind sympathy I
feel that I could not have embarked on the present work.

Many of ideas and expressions in this research report
have been developed and sponsored by the works of numerous
authors and writers whom I do not know personally but
indirectly owe to them the completion of the present task.

I would be failing in my duty if I do not record my deep
sense of gratitude to my parents, who always inspired me in
my personal and professional pursuits and likewise I cannot
forget at this juncture, my wife, Royphim, who extended all
moral support for completing of the study.
