ACKNOWLEDGEMENT

The present study is an attempt to minimise the overgrowing rate of population of India and to suggest some steps regarding solving this crucial problem. For that I have constructed the attitude scale on population education for the development of attitudes of student-teachers of primary teachers training colleges. I have also prepared instructional material on population education.

The study has been completed within a stipulated time. It is because of earnest help and valuable guidance that I got at every cross-roads of the investigation.

I express my profound sense of gratitude to my guide Late Dr. B.V. Patel, former Prof. & Head, Department of Education, Sardar Patel University, Vallabh Vidyanagar. I should gratefully acknowledge that but for his help the work could not have seen the day light.

I also express my deep sense of gratitude to my present guide Dr. I.A. Vora, Reader, Department of Education, Sardar Patel University for helping me to pick up the thread of work again without allowing it resulting into a skein. His continuous encouragement has worked miraculously in the days of sorrow and bereavement due to
the sudden demise of my learned guide late Dr. B.V. Patel.

I also express my sense of gratitude to all the principals of primary teachers training colleges, lecturers, and trainees of Gujarat state for giving me kind co-operation.

I am also thankful to the experts in the area of population education who spared their valuable time to go through the material and items of scales in making.

I am also thankful to those who have directly or indirectly helped and rejoiced in progress of work.

I express my deep sense of obligation to my family members who helped and provided me continuous inspiration.

I am also thankful to Mr. V.P. Patel who cared to read and typed this report neatly.
