ACKNOWLEDGEMENTS

I will ever owe a considerable debt of gratitude to my guiding teacher and mentor Professor J. A. Inamdar, Head, Department of Biosciences, for suggesting this interesting problem, thoughtful guidance, everwilling help and parental affection. His ideas and thoughts reflect throughout the length of the thesis.

I heartily thank the C S I R for financial assistance. The help rendered by the authorities of P R L, Ahmedabad for SEM (coating and scanning) facilities is gratefully acknowledged.

I am also thankful to Mr. Sunil S. Patel, Technician, Department of Physics, for helping me in TEM observations and photography.

To acknowledge my indebtedness to all my colleagues and friends in the department as well as outside would require me to mention many a number of names. Space allows only a corporate vote of thanks. Special mention must be given to the great volume of assistance and encouragement provided by Dr. J. S. S. Mohan.

It is impossible to put into words the sum total of my gratitude to my parents as well as my sister and brother, for their constant encouragement and support.

I thank Mr. Niranjan Parmar for his neat and prompt typing of the thesis.

- R. BAGAVATHI SUBRAMANIAN
