ACKNOWLEDGMENT

The culmination of any work gives a sense of satisfaction. Looking back, my project and thesis would not have seen the light of the day without the guidance and help of many.

A special place of honor is for my professor, Dr. Datta Madamwar, for his inspiring guidance, unstinting support and keen interest in my project work.

I will be ever grateful to the Head, Department of Biosciences, for his inspiring words of encouragement and wholehearted support.

I am indebted to Dr. Ray and Dr. K.C. Patel for their constructive suggestions and for their keen motivation to help me achieve my project objectives.

I heartily acknowledge my indebtedness to DNES who have provided me with the necessary funds and finance for the project.

My laboratory colleagues deserve special mention for their wholehearted cooperation.

Last, but not least, I am thankful to my parents and my wife for being with me in all my endeavors and for sharing my trials and tribulations in the process of achieving success.

VIKRAM PATEL
