ACKNOWLEDGEMENT

It is obvious that the population of the countries all over the world is increasing day by day. Of course, the explosion of the population has affected the standards of education. Under these conditions, the teachers should not be left alone to depend upon his own resources and talents, but should be provided with new techniques for facilitating effective learning and reliable instructional materials for the mass education of both formal and nonformal education. To fulfil the stated requirements, programmed learning materials are developed and utilised as an educational technology.

Programmed learning is a new and exciting movement in Thailand. Realizing that there is a great demand for it, the present investigator developed the programme and carried out the experiments for its suitability in practical conditions.

To accomplish the present research work, the investigator got help from various sources. Therefore he would like to acknowledge their help.

Firstly, a very deep sense of gratitude is expressed to his guide, Dr. (Miss) N.L. Pandya for her valuable guidance throughout the course of the study. Without her continuous inspiration, encouragement and guidance, it would not have been possible for the investigator to complete this task.
The investigator also thanks heartily Dr. D.N. Patel for his keen interest and guidance given in research design and statistical techniques for the present investigation. His guidance and suggestions have indeed enriched the present research work to a great extent.

He thanks Prof. B.V. Patel, Principal, M.B. Patel College of Education, for providing all the facilities in the institution.

The investigator feels highly indebted to Dr. J.M. Bhatt, Dr. M.T. Patel, Dr. D.S. Surve, Dr. J.Z. Patel, Dr. C.C. Pathak and Dr. J.C. Parish for their amicable advice at various stages of the study.

He is also thankful to his friend, Miss Saiya Prasertphak for her timely help and encouragement during his study.

The investigator is grateful to his colleagues, the lecturers and students of the Teachers' Colleges in North-East region of Thailand whose active co-operation has been of a great value to make the conduction of the experiments successful.

Finally, thanks are due to the Thai Government for granting the investigator the financial support during his study abroad.
