## CONTENTS

1. Introduction
   1. Malaria Epidemic 1
   2. Life Cycle of Malaria Parasite 5
   3. Available chemotherapy, side effects and resistance 7
   4. Scope and advantage of the herbal anti-malarial drug 11
   5. *Calotropis procera*: A herbal source to cure malaria 12

6. Literature survey
   6.1 Botany and ecology 13
   6.2 Sanskrit synonyms of *C. procera* 15
   6.3 *Calotropis* in Ayurveda 16
   6.4 *Calotropis* in ethnopharmacology 17
   6.5 Pharmacologically relevant constituents of *C. procera*
      6.5.1 Constituents of latex 18
      6.5.2 Constituents of stem 19
      6.5.3 Constituents of root 19
      6.5.4 Constituents of aerial part 20
      6.5.5 Compounds reported from *Calotropis* spp. 24
      6.5.6 Activities reported from the isolated compounds of *Calotropis* spp. 25

6.6 Pharmacological profile of *C. procera*
   6.6.1 Anti-ulcer activity 28
   6.6.2 Anti-pyretic activity 28
   6.6.3 Anti-diarrhoeal activity 29
   6.6.4 Anti-coccidial activity 30
   6.6.5 Anti-inflammatory and Analgesic activity 31
   6.6.6 Anti-cancer activity 32
   6.6.7 Wound healing activity 33
   6.6.8 Anthelmintic activity 33
   6.6.9 Hepatoprotective and antioxidant activity 35
   6.6.10 Schizonticidal activity 35
   6.6.11 Reversible anti-ovulatory activity 36
   6.6.12 Larvicidal activity 37
   6.6.13 Molluscicidal activity 37
   6.6.14 Antimicrobial activity 37

6.7 Toxicity 38

7. The objectives covered under the research 38

2. Materials & Methods

   1. In vitro culture of malaria parasite- *Plasmodium falciparum*
      1.1 Culture initiation from cryopreserved infected blood cells 42
      1.2 Maintenance of *P. falciparum* continuous culture 42
      1.3 Media preparation and sterilization procedure 44
      1.4 Preparation of complete media for culture maintenance 45
      1.5 Collection and procedure for human erythrocytes 47
      1.6 Collection and procedure for human serum 47
      1.7 Stain preparation for malaria parasites
         1.7.1 Preparation of Field stain 48
         1.7.2 Preparation of JSB stain 49
2. Extractions derived from the selected plant parts

2.1 Selection and processing of plant material

2.2 Extraction derived by aqueous and organic solvents

2.2.1 Aqueous extraction

2.2.2 Partition of aqueous decoction with organic solvents

2.2.3 Solvent extraction

3. In vitro schizonticidal screening of plant extracts

3.1 Synchronization of culture

3.2 Schizonticidal testing of plant extracts

3.3 Derivation of IC50 value

4. In vivo extract testing against P. berghei infected mice with toxicity study

4.1 Initiation of infection in mice model

4.2 Base line values for body weight, rectal temperature and hemoglobin of mice

4.3 Standardization of blood stage and cerebral malaria

4.4 Standardization of Chloroquine regimens for blood stage malaria in SW mouse

4.5 Extracts evaluated for in vivo anti-malaria testing

5. Chemical profile of active extracts

6. Pharmacognosy of the plant parts used in herbal formulation

6.1 Sample preparation and solvent systems for HPTLC fingerprinting

6.2 IR and NMR specification for fingerprinting of powdered dry latex of C. procera

6.3 Sample preparation and specification of GC-MS of essential oil of latex

6.4 Method of extraction for extractable value determination

6.5 Ash value determination

6.6 Growth rate of apical bud of Calotropis procera

7. Clinical trial of herbal regimen

7.1 Criteria for examination and medication of patients

7.2 Blood smear collection, parasite identification and counting

7.2.1 Collection, fixing and staining of blood smears

7.2.2 Identification of parasite from thin film

7.2.3 Malaria parasite count from thick film

7.3 Involvement of doctors

7.4 Design of forms for data collection during treatment

7.5 Assessment of efficacy

7.6 Computer software design for management and processing of data

8. Commercial production of medicine with quality control standards

8.1 Physical parameters of raw material and prepared medicines

8.2 Total Microbial burden

9. Antibacterial testing of plant extracts

9.1 Test organisms

9.2 Antibacterial test

9.3 Minimum Inhibitory Concentration (MIC)

10. Micropropagation of Calotropis procera from node explants

11. Statistics applied in the study

12. Abbreviations used in the text
3. Results

1. In vitro culture of malaria parasite- *Plasmodium falciparum* 94
2. In vitro schizonticidal screening of plant extracts 99
3. In vivo extract testing against *P. berghei* infected mice with toxicity study
   3.1 Base line values for body weight, rectal temperature and hemoglobin of mice 107
   3.2 Infection of *P. burghei* in SW mice strain 108
   3.3 Efficacy of latex and apical bud decoction on *P. berghei* infected mice models 113
   3.4 Acute toxicity Study of Apical bud powder and Dried Latex 121
4. Chemical profile of active extracts 122
   4.1 Analysis of acetone extract from dry latex and apical bud 122
   4.2 Comparison of fractions derived from water decoction of apical bud and latex through IR spectroscopy 130
5. Pharmacognosy of the plant parts used in herbal formulation 136
   5.1 HPTLC fingerprinting for identification of powdered apical buds and latex of *C. procera* 136
   5.2 IR and NMR fingerprinting for identification of powdered dry latex of *C. procera* 140
   5.3 Identification through GC of essential oil derived from latex 143
   5.4 XRF analysis for detection of elements 144
   5.5 Detection of heavy and toxic metals 145
   5.6 Extractable value of different solvents of plant parts 146
   5.7 Ash value 147
   5.8 Growth rate of apical bud of *Calotropis procera* 148
6. Clinical trial of herbal regimen 151
   6.1 Pilot study for herbal anti-malarial treatment 151
   6.2 Out door randomized clinical trial of herbal preparation(s) for the treatment of malaria
      6.2.1 Fever reduction time 162
      6.2.2 Parasite clearance time 164
      6.2.3 Standardization of required safe dose 166
   6.3 Treatment report of selected cases of *P. falciparum* with feed back reports of victims 174
7. Commercial production of medicine with quality control standards 181
   7.1 Collection and processing of plant parts for medication purpose 181
   7.2 Preparation of dispensable composition with calculation of manufacturing cost 183
   7.3 Quality control standards maintained during drug production 188
   7.4 Total Microbial load 189
8. Antibacterial testing of plant extracts 190
9. Micro-propagation of *Calotropis procera* from node explants 193

4. Discussion 195-213
5. Conclusion 214-217
