ACKNOWLEDGMENTS

This thesis is the product of hundreds of hours of laboratory and administrative work. Although there is but one name attached to this effort, there are numerous associates, friends and relatives who have played an important role in the success of this project. I would like to take opportunity to express my thanks and appreciation to them at this time.

If I had to pick a people who influenced this project the most, it would be my research guide, Prof. M.K. Agarwal. Prof. Agarwal's unique insight into the problem, and support in completing the task were critical to its completion and success.

I am thankful to Prof. R. Srivastava, Head, Department of Physics for providing necessary facilities for research.

I record my whole hearted thanks to Dr. P. K. Garg and Dr. D. Lakshminarayana for their helpful suggestions during the course of the work.

There are many others at Department whose contributions were critical to the project's success. They include my branch co-workers (Sunil, Ajay, Milind, Deven, Chaki and Dilip).

I also take this opportunity to thank University Grants Commission (UGC), New Delhi for the award of research fellowship during the course of present work.

Last but not least, I would like to thank my family and friends for their support over the years and guidance in bringing me to this culmination. Most importantly, I would like to thank my mother, who endured the process and provide invaluable support during the long days and nights that were required to complete the project.
