Garment industry started in the 19th century which catered to the simple needs like making uniforms to create the feeling of unity and oneness. But now the development of this industry is based on fashion and the western culture.

To start such a unit any individual should have knowledge of this field, planning, capital, managerial skill etc. all which are important in their field. A well organised unit will contribute significantly to the profitability and popularity of this section in the Garment industry.

An effort was made to study ten garments units of Ahmedabad which produced shirts. A case study was carried out with an aim to know the details of the units for further study.

It was found that majority of the units were based on partnership and proprietorship. Financial assistance is got from the bank. The government too gives help in the form of subsidy, there is no need of no license for the domestic market as these are home scale industries. Raw material was purchased for one month from the local market and cosmopolitan cities.

It was concluded from this study that such garment producing units can easily be started with an initial investment of about Rs. 4 lakhs, and by using Indian machines and opting for mass production would result in an increase in quality and quantity.
