LIST OF FIGURES

Figure 1.1  (a. to f.) Various feeding devices used in pneumatic conveying system.
Figure 1.2  (a. to d.) Feeding devices used by different investigators
Figure 2.1  Feed hopper and nozzle
Figure 2.2  Circular pipe feeder
Figure 2.3  Feeder with side hopper
Figure 2.4  Primary and Secondary nozzles
Figure 3.1  Schematic layout of experimental set-up (without fluidization)
Figure 3.2  Arrangement of Primary and Secondary nozzles
Figure 3.3  Photograph showing the experimental set-up
Figure 3.4  Arrangement of primary nozzle and straight tube
Figure 3.5  Arrangement of primary and secondary nozzle (convergent-divergent)
Figure 3.6  Photograph showing the box type Injector feeder
Figure 3.7  Photograph showing the different arrangements of primary and secondary nozzles
Figure 3.8  Schematic layout of experimental set-up (with fluidization)
Figure 4.1  Variation of $\dot{m}_p$ versus $S$ for different $L_i$
Figure 4.2  Effect of $\dot{m}_p$ versus $S$
Figure 4.3  Variation of $\dot{m}_p$ versus $S$ for different $L_m$
Figure 4.4  Relation between $\dot{m}_p/\dot{m}_a$ versus $L_m/d_m$ and pressure recovery versus $L_m/d_m$ for $S = 13.0$ mm
Figure 4.5  Variation of $\dot{m}_p$ versus $S$ for different $d_m$; $L_m = 150.0$ mm
Figure 4.6  Variation of $\dot{m}_p$ versus $S$ for different $d_m$; $L_m = 180.0$ mm
Figure 4.7  Variation of $\dot{m}_p$ versus $S$ for different $L_o$; $L_i = 55.0$ mm and $L_m = 150.0$ mm
Figure 4.8 Variation of $\dot{m}_p$ versus $S$ for different $L_o$; 
$L_i = 55.0$ mm and $L_m = 180.0$ mm
Figure 4.9 Variation of $\dot{m}_p$ versus $S$ for different $L_o$; 
$L_i = 73.4$ mm and $L_m = 150.0$ mm
Figure 4.10 Variation of $\dot{m}_p$ versus $S$ for different $d_p$; 
$L_m = 150.0$ mm
Figure 4.11 Variation of $\dot{m}_p$ versus $S$ for different $d_p$; 
$L_m = 180.0$ mm
Figure 4.12 Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_a$; 
$L_m = 150.0$ mm
Figure 4.13 Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_a$; 
$L_m = 180.0$ mm
Figure 4.14 Static pressure distribution for different $S$; 
$S = 0.0, 8.0$ and $18.0$ mm 
$L_m = 150.0$ mm; $d_m = 19.0$ mm
Figure 4.15 Static pressure distribution for different $S$; 
$S = 0.0, 8.0$ and $18.0$ mm; $L_m = 180.0$ mm; 
$d_m = 19.0$ mm
Figure 4.16 Static pressure distribution for different $S$; 
$S = 0.0, 8.0$ and $18.0$ mm; $L_i = 51.0$ mm; $L_m = 150.0$ mm 
$L_o = 82.3$ mm; $d_m = 22.5$ mm
Figure 4.17 Static pressure distribution for different $S$; 
$S = 0.0, 8.0$ and $18.0$ mm; $L_i = 51.0$ mm; $L_m = 180.0$ mm; 
$L_o = 82.3$ mm; $d_m = 22.5$ mm
Figure 4.18 Relation between $\dot{m}_p$ versus $S$ for different $L_m$ for rai
Figure 4.19 Relation between $\dot{m}_p$ versus $S$ for different $d_p$ 
for rai; $L_m = 150.0$ mm
Figure 4.20 Relation between $\dot{m}_p$ versus $S$ for different $d_p$ 
for rai; $L_m = 180.0$ mm
Figure 4.21 Variation of $\dot{m}_p/\dot{m}_a$ versus $S$ for different $\dot{m}_a$ for rai; $L_m = 150.0$ mm; $d_p = 10.0$ mm.
Figure 4.22 Variation of $\dot{m}_p/\dot{m}_a$ versus $S$ for different $\dot{m}_a$ for rai; $L_m = 180.0$ mm; $d_p = 10.0$ mm.
Figure 4.23  Variation of $\dot{m}_p / \dot{m}_a$ versus $S$ for different $\dot{m}_a$ for ragi; $L_m = 150.0$ mm; $d_p = 8.3$ mm

Figure 4.24  Variation of $\dot{m}_p$ versus $S$ for wheat and ragi for different $\dot{m}_a$

Figure 4.25  Variation of $\dot{m}_p$ versus $S$ for convergent-divergent secondary nozzle

Figure 4.26  Variation of $\dot{m}_p$ versus $S$ for straight tube

Figure 4.27  Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_{aux}$; $L_m = 150.0$ mm; $d_p = 10.0$ mm; $d_m = 19.0$ mm

Figure 4.28  Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_{aux}$; $L_m = 180.0$ mm; $d_p = 10.0$ mm; $d_m = 19.0$ mm

Figure 4.29  Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_{aux}$; $L_m = 180.0$ mm; $d_p = 8.3$ mm; $d_m = 19.0$ mm

Figure 4.30  Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_{aux}$; $L_m = 150.0$ mm; $d_p = 14.0$ mm; $d_m = 19.0$ mm

Figure 4.31  Variation of $\dot{m}_p$ versus $S$ for different $\dot{m}_{aux}$; $L_i = 51.0$ mm; $L_m = 180.0$ mm; $L_G = 82.3$ mm; $d_p = 10.0$ mm; $d_m = 22.5$ mm

Figure 4.32  Static pressure distribution for $S = 13.0$ mm; $L_m = 150.0$ mm; $d_m = 19.0$ mm with and without fluidization for different $\dot{m}_{aux}$

Figure 4.33  Static pressure distribution for $S = 13.0$ mm; $L_m = 180.0$ mm; $d_m = 19.0$ mm with and without fluidization for different $\dot{m}_{aux}$

Figure 4.34  Static pressure distribution for $S = 13.0$ mm; $L_i = 51.0$ mm; $L_m = 180.0$ mm; $L_G = 82.3$ mm; $d_m = 22.5$ mm with and without fluidization for different $\dot{m}_{aux}$
