ACKNOWLEDGEMENTS

The author is deeply indebted to Dr. R. Sakthivadivel, Director, Centre for Water Resources for his valuable guidance and supervision throughout the period of research work and also in the preparation of the thesis. The valuable time he gave for discussing the problems connected with the work is gratefully acknowledged. This research work was made possible due to the funds provided by the Central Board of Irrigation and Power, Government of India and the author records his gratitude to this organization. The author is also grateful to the Anna University for the facilities and financial help extended.

No amount of words can express the author's deep sense of gratitude to Sri R. Baratan, Consulting Engineer, Madras, for the help, guidance, support and encouragement extended by him throughout the research period. The author could not have completed this research work without his active co-operation and sense of involvement.

The co-operation extended by Messrs R. Baratan, Myrada Irrigation Program, Bangalore, and AFRO-GIT-II, Bangalore, in giving their valuable data is gratefully acknowledged.

The author also thanks the Doctoral Committee members, Dr. M.S. Jagatheesan, College of Engineering, Madras and Dr. S.C. Jacob, University of Madras, Madras.
for their co-operation and valuable suggestions during the research period.

The author records his deep appreciation for the friendly help given by Sri K.V. Jayakumar in computer work as well as preparation of thesis. He also thanks Dr. T. Babu Rao, Sri G. Laxmanan, Sri V.V. Sarma of Centre for Water Resources and K. Balasubrahmenyam, Final M.E. student, for their help. The author appreciates the cooperation extended by D.M. Indrababu and P.V. Viswanathan.

This thesis is very affectionately dedicated to Sri K. Baratan as a token of the author's appreciation for his contributions to the science of groundwater development in general and to this thesis in particular.
