ACKNOWLEDGEMENT

The author records his deep sense of gratitude to Dr. R. Sakthivadivel, Director, Centre for Water Resources, Anna University, Madras, who initiated him to the field of research and encouraged him. Dr. M. Karmegam, Assistant Professor, Centre for Water Resources, was a source of inspiration and guidance. The author gratefully acknowledges all the help rendered by him.

Sincere thanks are due to Dr. K. Elango, Professor, Department of Civil Engineering, Indian Institute of Technology, Madras and Dr. M. Narayanan, Professor, Centre for Water Resources for their help and advice as the members of the Doctoral Committee.

The author expresses his gratitude to the authorities of Anna-malai University who sanctioned him study leave to take up this study.

This study formed part of the project, 'Flood routing studies with a special reference to Indian rivers', funded by the Central Board of Irrigation and Power, Government of India and this financial support is acknowledged.

The author thanks the Central Water Commission, Government of India and the Tamil Nadu Electricity Board, Government of Tamil Nadu for providing him necessary data.
The author thanks all the members of staff and the graduate students of the Centre for Water Resources, who helped him in this study in one way or other.

The author appreciates the encouragement received from his wife Malini and his children Sanjay and Sharmila.
