Figure 3.6. Feedforward Network .................................................................77

Figure 3.7. Neural Network Processing ......................................................78

Figure 3.8. Utilization of the network ..........................................................79

Figure 3.9. Output Training of the given input Regression Plot ......................80

Figure 3.10. Validating the model with the comparison ..................................84

Figure 4.1. Data are organized in images ......................................................86

Figure 4.2. The seasonality parameters computed in TIMESAT images ..........87

Figure 4.3. The seasonality parameters extracted in TIMESAT images ..........88

Figure 4.4. Unipolar Sigmoidal \[f(x) = \frac{1}{1 + \text{POW}(e^{-x})}\] .......................91

Figure 4.5. Map of Nagapattinam .................................................................96

Figure 4.6. Cropping the image using the linear algebra method ....................97

Figure 4.7. Median filtration using salt-pepper technique .............................98

Figure 4.8. Time series prediction using the Multi Layer Neural Network ..........101

Figure 4.9. Comparative study of the learning process methods .....................102

Figure 4.10. Comparison chart of the In-situ Data Vs the Satellite Data ..........103

Figure 4.11. Data flow design for the calculation of SWH ............................107
Figure 4.12. Prediction of SWH with their functional values ........................................107
Figure 4.13. A proposed model for the data of the significant wave heights ............108
Figure 4.14. Training Window ..................................................................................110
Figure 4.15. The output of the trained window .......................................................111
Figure 4.16. The performance of the trained data sets .............................................111
Figure 4.17. ANFIS Editor GUI Window and their Interfaces ..............................119
Figure 4.18. ANFIS model Structure .....................................................................120
Figure 4.19. ANFIS Editor Window .....................................................................120
Figure 4.20. ANFIS Training Window .................................................................121
Figure 4.21. Field work carried out on the satellite passing day in the study area ......122
Figure 5.1. Wave Height Prediction using Multilayer Neural Network
Data set Prediction Window-Before Training ......................................................129
Figure 5.2. Wave Height Prediction using Multilayer Neural Network
Data set Prediction Window-After Training .......................................................130
Figure 5.3. Significant Wave Height Prediction Window .......................................131
Figure 5.4. The Best Performance Curves ............................................................126
Figure 5.5. The Regression Curves ......................................................................137
Figure 5.6. The Performance Progress Curves ...............................................................138

Figure 5.7. The Time Series Curves............................................................................139

Figure 5.8. The Autocorrelation Curves......................................................................140

Figure 5.9. The Error Histogram ...............................................................................141

Figure 5.10. The Contours...........................................................................................142

Figure 5.11. Contour for Observed Data Values..........................................................143

Figure 5.12. Simulation Progress Window ....................................................................144

Figure 5.13. Input and the destination Column before Training....................................145

Figure 5.14. Input and the destination Column after Training.......................................145

Figure 5.15. The Calibrated Fuzzy Prediction in Time Series Analysis .........................146

Figure 5.16. Cross Validation Window..........................................................................147
