LIST OF FIGURES

fig No.1.1: Some parameters influencing irrigated system management ........................................ 4
fig No.2.1: Hurdles and steps of an expert’s diagnosis ................................................................. 9
fig No.2.2: The expert diagnostic process ..................................................................................... 12
fig No.2.3: Reasoning strategies .................................................................................................... 17
fig No.3.1: Organisation of an expert system .................................................................................. 27
fig No.3.2: Comparative table of some expert system shells ......................................................... 37
fig No.3.3: Methodology to build an expert system ....................................................................... 41
fig No.3.4: Knowledge acquisition methods .................................................................................. 39
fig No.4.1: Interviewed experts classification ................................................................................. 44
fig No.4.2: Sample diagnostic classification .................................................................................. 44
fig No.5.1: Location map ................................................................................................................ 47
fig No.5.2: The climatic components of the seasons ...................................................................... 50
fig No.5.3: Soils of Tamilnadu ........................................................................................................ 51
fig No.5.4: Different sources of irrigation ....................................................................................... 55
fig No.5.5: Administration and tanks ............................................................................................. 57
fig No.5.6: Histogram of rainfall distribution .................................................................................. 59
fig No.5.7: Average yearly rainfall profile ....................................................................................... 60
fig No.5.8: Evapotranspiration and average precipitation ............................................................... 62
fig No.5.9: Cumulative waterspread area and tank storage volume of Kodur tank ...................... 63
fig No.5.10: Fillings in the two tanks in the past 4 years ................................................................. 63
fig No.5.11: Rainfall and water table fluctuations for two consecutive years ............................... 65
fig No.5.12: Crop distribution ........................................................................................................ 66
fig No.5.13: Yearly rotation of rice irrigated area ......................................................................... 67
fig No.5.14: Notion of type for a tank irrigated system ................................................................. 74
fig No.5.15: Agricultural context of a tank irrigated system ......................................................... 74
fig No.5.16: Element of agricultural context that can be loaded from data base ....................... 75
fig No.5.17: Resource of a tank irrigated system .......................................................................... 76
fig No.5.18: Characteristics of the command area and of the distribution system ........................ 76
fig No.5.19: Management aspects of a tank irrigated system ....................................................... 77
fig No.5.20: Elements accounting village status, history, and dynamics ...................................... 78
fig No.5.21: Simultaneous representations used by agronomists .................................................. 85
fig No.5.22: Different types of diagnosis team ............................................................................... 89
fig No.5.23: The different partners objectives ............................................................................... 90
LIST OF FIGURES

fig No.5.24: Field priorities according to diagnostic 91
fig No.6.1: Sample empty crop data sheet 103
fig No.6.2: Function menu in an agronomic simulation tool 104
fig No.6.3: A sample tool of agritool display 102
fig No.6.4: Social group power description table 107
fig No.6.5: Possible performance criteria 110
fig No.7.1: Contradictory rules for two different objectives 115
fig No.7.2: Implicit elements 116
fig No.7.3: General change in the diagnosis process 117
fig No.7.4: Political rules according to the room of decision 118
