List of Tables

Table 1  Macroscopical evaluation.................................................................107
Table 2  Transverse section through Midrib and lamina .........................108
Table 3  Transverse section of Lamina............................................................110
Table 4  Measurement of leaf elements............................................................110
Table 5  Histochemical colour reactions of *Wrightia tinctoria* leaves......111
Table 6  Physiochemical parameters*Wrightia tinctoria*..............................112
Table 7  Fluorescence characters of *Wrightia tinctoria* leaves.................113
Table 8  Organoleptic characteristics of *Wrightia tinctoria* oil extract and coconut oil.................................................................115
Table 9  Physiochemical characterization of *Wrightia tinctoria* oil extract and coconut oil.................................................................115

Table 10  The chemical constituents of *Wrightia tinctoria* oil extract......116
Table 11  Antimicrobial activity of free and bounded flavonoids of *Wrightia tinctoria* leaf on skin pathogen.............................................119
Table 12  MIC and MFC/MBC values of free and bounded flavonoids of *Wrightia tinctoria* leaf.................................................................125
Table 13  The total phenolic and total flavonoid contents in methanolic extract of *Wrightia tinctoria* (Roxb) R.Br. leaves.........................129
Table 14  Total antioxidant activity of the various fractions of methanolic extract of Wrightia tinctoria (Roxb) R.Br. leaves.........................131
Table 15  Preformulation Studies for ointment base selection......................133
Table 16  Trial selection of ointment composition for Wrightia tinctoria extract incorporation.................................................................134

Table 17  Trial formulations for selection of optimised final formula........135

Table 18  Composition of optimized final formula..............................136

Table 19  Composition of dithranol ointment (Allopathy Control)........136

Table 20  In-vitro evaluation of herbal formulation..............................139

Table 21  Stability studies of herbal formulation at 4–8 C serving as Control..................................................................................140

Table 22  Stability studies of herbal formulation at 30 C, 70%Rh..........140

Table 23  Dermal observations for erythema and edema......................143

Table 24  Calculation of primary irritation index....................................144

Table 25  Evaluation of Primary Irritation Index (PII).............................144

Table 26  Effect of Wrightia tinctoria ointment on wound size (in sqmm) in excision wound model....................................................146

Table 27  Efficiency of Wrightia tinctoria ointment on wound healing (in percentage) in excision wound model.................................147

Table 28  Effect of Wrightia tinctoria ointment on wound epithelization and wound contraction (%) in excision wound model.............149

Table 29  Determination of tensile strength in incision wound model.....150

Table 30  Demographic Characteristic of study subjects for Group I........154

Table 31  Demographic Characteristic of study subjects for Group II.....155
Table 32  Statistical Comparison of Demographic and Other Baseline Characteristic between individual groups........................................156

Table 33  Statistical Comparison of Gender enrollment between individual groups..........................................................157

Table 34  Statistical Analysis of Vital Sign Measurements for BP-Systolic......158

Table 35  Statistical Analysis of Vital Sign Measurements for BP-Diastolic...159

Table 36  Statistical Analysis of Vital Sign Measurements for Pulse rate........161

Table 37  Statistical Analysis of Vital Sign Measurements for Respiratory Rate...........................................................................................................162

Table 38  Statistical Analysis of Haemogram Measurements for TC..............164

Table 39  Statistical Analysis of Haemogram Measurements for DC-P........165

Table 40  Statistical Analysis of Haemogram Measurements for DC-L.........166

Table 41  Statistical Analysis of Haemogram Measurements for DC-E........167

Table 42  Statistical Analysis of Haemogram Measurements for HB..............168

Table 43  Statistical Analysis of LFT Measurements for SGOT.................169

Table 44  Statistical Analysis of LFT Measurements for SGPT................170

Table 45  Statistical Analysis of LFT Measurements for Serum Bilirubin........171

Table 46  Statistical Analysis of RFT Measurements for Serum creatinine.....172

Table 47  Statistical Analysis of RFT Measurements for Serum Urea............173

Table 48  Statistical Analysis of Scaling.........................................................175

Table 49  Statistical Analysis of Erythema.........................................................176
Table 50  Statistical Analysis of new lesions...............................177
Table 51  Statistical Analysis of Histopathology Measurements for
Parakeratosis.................................................................178
Table 52  Statistical Analysis of Histopathology Measurements for
Stratum Granulosum.......................................................180
Table 53  Statistical analysis of histopathology measurements for
Munro’s Microabscess......................................................182
Table 54  Statistical analysis of histopathology measurements for acanthosis..184
Table 55  XP glide score of indirubin and known inhibitors for the proteins..188
Table 56  Research molecules interacting AHR pathway.........................199
Table 57  New biologics under phase 3 development following IL 17 A
Pathway...........................................................................202
