Index of Photo plate

Plate No. 1. Distribution of Genus Uraria in Maharashtra State

Plate No. 8. Trichomes of Uraria.

Plate No. 9. Stomata of Uraria.

Plate No. 10. Maceration of Uraria lagopus.

Plate No. 11. Maceration of Uraria picta

Plate No. 12. Maceration of Uraria rufescens.

Plate No. 13. Effect of various treatments on seed germination of Uraria lagopus, A. Control, B. Effect Presoking in 72 hour, C. Effect of Sulphuric acid in 10 min., D. Effect of Hydrochloric acid in 10 min., E. Effect of Hydrochloric acid in 15 min., and F. Effect of Nitric acid in 15 min.

Plate No. 15. Effect of various treatments on seed germination of *Uraria rufescens*, A. Control, B. Effect of Presoking in 72 hour, C. Effect of sulphuric acid in 15 min., D. Effect of hydrochloric acid in 15 min., E. Effect of nitric acid in 15 min. and F. Effect of dry heat in 6 hours (80°C).

Plate No. 16. Seedling morphology of *Uraria lagopus*, A. Cotyledons converting into cotyledonary leaves, B. Fully developed cotyledonary leaves, C. Second pair of leaves appearing, D. Developing second pair of leaves, E. Fully developed second pair of leaves and F. Elongated second internode.

Plate No. 17. Seedling morphology of *Uraria picta*, A. Cotyledons converting into cotyledonary leaves, B. Fully developed cotyledonary leaves, C. Second pair of leaves appearing, D. Developing second pair of leaves, E. Fully developed second pair of leaves and F. Elongated second internode.

Plate No. 18. Seedling morphology of *Uraria rufescens*, A. Cotyledons converting into cotyledonary leaves, B. Fully developed cotyledonary leaves, C. Second pair of leaves appearing, D. Developing second pair of leaves, E. Fully developed second pair of leaves and F. Elongated second internode.

Plate No. 19. Seed Morphology and Testatopography of *Uraria lagopus*.

Plate No. 20. Seed Morphology and Testatopography of *Uraria picta*.

Plate No. 21. Seed Morphology and Testatopography of *Uraria rufescens*.

Plate No. 22. A. 10% Native-PAGE banding profile of crude seed proteins of three species of genus *Uraria*. Lane I: *Uraria lagopus*, Lane II: *Uraria picta* and Lane III: *Uraria rufescens*. Fig. B. 12% SDS-PAGE electrophoretic pattern of crude seed proteins from three species of genus *Uraria*. Lane I:
molecular weight marker, Lane II: *Uraria lagopus*, Lane III: *Uraria picta* and Lane IV: *Uraria rufescens*.

**Plate No. 23.** Qualitative representation of TLC of *Uraria lagopus*. A. Apigenin available in ethyle acetate and water fractions, B. Stigmasterol available in chloroform fraction, C. Apigenin available in ethyl acetate and water fractions, D. Stigmasterol available fractions, E. Apigenin available in ethyl acetate and water fractions and F. Lupiol and Stegmastroler available in chloroform and ethyl acetate fractions.

**Plate No. 24.** Qualitative representation of TLC of *Uraria picta*. A. Apigenin available in chloroform and ethyle acetate fractions, B. Lupiol and Stigmasterol available in chloroform fraction, C. Apigenin available in chloroform and ethyl acetate fractions, D. Lupiol and Stigmasterol available in chloroform fractions, E. Apigenin available in ethyl acetate and water fractions and F. Lupiol and Stigmasterol available in chloroform and ethyl acetate fractions.

**Plate No. 25.** Qualitative representation of TLC of *Uraria rufescens*. A. Apigenin available in ethyle acetate and water fractions, B. Lupiol and Stigmasterol are not available in all fractions, C. Apigenin available in ethyl acetate fraction, D. Stigmasterol available in chloroform fraction, E. Apigenin available in ethyl acetate fraction and F. Lupiol and Stigmasterol not available in all fractions.

**Plate No. 26.** Callus induction of *Uraria*, A to D. Various callus induction of *Uraria lagopus*, E to H. Various callus induction of *Uraria picta* and I to L. Various callus induction of *Uraria rufescens*.

**Plate No. 27.** Regeneration of *Uraria lagopus* A. Callus induction on MS media with 0.5-2.5 BAP and NAA mg/l, B and C Sprouting of shoots from callus on MS media with 0.5-2.5 BAP and NAA mg/l, D and E Shoot formation of MS media supplemented with 0.5-2.5 BAP and NAA mg/l, F Shoot and root formation on MS media supplemented with 0.5-2.5 BAP and NAA mg/l, G
Plate No. 28. Regeneration of *Uraria picta* A. Germination of seed on MS liquid (bridge method) media, B and C Sprouting of shoots from cotyledon of seedling explant on MS media with 0.5-2.5 BAP and NAA mg/l, D regeneration of Shoot formation on MS media with supplemented 0.5-2.5 BAP and NAA mg/l, E Shoot and root formation on MS media with supplemented 0.5-2.5 BAP and NAA mg/l, F Hardened acclimatization of regeneration plantlets in cocopith and I Tissue culture raised plant in soil pots.

Plate No. 29. Regeneration of *Uraria rufescens* A and B Shoot induction on MS media with 0.5-2.5 BAP and NAA mg/l, C Multiplication of shoots from nodal segments on MS media with 0.5-2.5 BAP and NAA mg/l, D Shoot and root formation on MS media supplemented with 0.5-2.5 BAP and NAA mg/l, E Hardened acclimatization of in vitro plantlets in germination tray with cockpith and F In vitro raised plant in soil pots.
