Figure 2.22: Bent core dimer composed of alkylene and siloxane spacers ................ 47
Figure 2.23: Laterally connected dimesogens ......................................................... 48
Figure 2.24: Bent core dimer contains acetylene as a spacer ................................. 49
Chapter 3: Experimental: Materials and methodology

Figure 3.1: Polarising optical microscope and its different parts .......................... 113
Figure 3.2: Schematic illustration of DSC Instrument........................................... 114

Chapter 4A: Oligomers: Bent-core liquid crystal (bent core dimers)

Figure 4.a.1: Different possible types of bent core dimers................................. 126
Figure 4.a.2: Molecular structures of bent core dimers ........................................ 128
Figure 4.a.3: DSC thermogram of 1,9-OM ......................................................... 131
Figure 4.a.4: Optical textures of 1a 1,9-OM under crossed polarizers ................. 132
Figure 4.a.5: DSC thermogram of 1,9-o-OM ...................................................... 132
Figure 4.a.6: Optical textures of 1,9-o-OM under crossed polarizers ................. 133
Figure 4.a.7: DSC thermogram of 1,9-m-OM ..................................................... 134
Figure 4.a.8: Optical textures of 1,9-m-OM under crossed polarizers ............... 134
Figure 4.a.9: Phase transition temperature of the compounds 1,9-OM, 1,9-o-OM and 1,9-m-OM in heating and cooling cycle .............................................. 135
Figure 4.a.10: Entropy of the compounds 1,9-OM, 1,9-o-OM and 1,9-m-OM in heating and cooling cycle ................................................................. 136
Figure 4.a.11: Enthalpy change during nematic-isotropic transition of the compounds 1,9-OM, 1,9-o-OM and 1,9-m-OM in heating and cooling cycle .................................................. 136
Figure 4.a.12: UV-Visible absorption spectra of dimers 1,9-OM, 1,9-o-OM and 1,9-m-OM in chloroform at $c = 1 \times 10^{-5}$ M ........................................... 137
Figure 4.a.13: UV-Visible absorption spectra of 1,9-OM in CHCl$_3$ ($c = 1 \times 10^{-5}$ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light ...................................................... 139
Figure 4.a.14: Molecular structure of trans (E) and cis (Z)-isosomers of the compound .......................................................... 140
Figure 4.a.15: UV-Visible absorption spectra of (1,9-o-OM) in CHCl$_3$ ($c = 1 \times 10^{-5}$ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light ...................................................... 141
Figure 4.a.16: UV-Visible spectra of 1,9-m-OM in CHCl$_3$ ($c = 1 \times 10^{-3}$M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light ...................................................... 141

Chapter 4B: Novel achiral 4-ring unsymmetrical bent core liquid crystals

Figure 4.b.1: 2, 5-bis (p-hydroxyphenyl)-1,3,4-oxadiazole (ODBP) derivatives ................................................................. 148
Figure 4.b.2: Molecular structure of the recorcinol derivatives ....................... 148
Figure 4.b.3: Molecular structures of the azo compounds of the two series 2a-e and 1a-e ................................................................. 149
Figure 4.b.4: Molecular structure, phases and phase transition temperature of some five ring compounds ................................................................. 149
Figure 4.b.5: Molecular structure of few four ring unsymmetrical bent-core molecules ......................................................................................... 150
Figure 4.b.6: DSC thermogram of 4-2M-OM and 6-2M-OM recorded in the second heating and second cooling cycle at 5°C min$^{-1}$ ............... 154
Figure 4.b.7: Phase transition temperatures of compounds, n-2M-OM as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 157

Figure 4.b.8: Enthalpy as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 157

Figure 4.b.9: Entropy as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 158

Figure 4.b.10: Nematic range as a function of number of carbon atoms in alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 158

Figure 4.b.11: Microphotographs of the compound 4-2M-OM at different temperature in nematic phase in cooling cycle ........................................... 159

Figure 4.b.12: Microphotographs of compound 6-2M-OM in nematic phase in cooling cycle ........................................................................................................ 160

Figure 4.b.13: UV-Visible absorption spectra of 4-2M-OM, 5-2M-OM and 6-2M-OM in chloroform (c = 1x10⁻⁵ M) ........................................................... 163

Figure 4.b.14: UV-Visible spectra of 4-2M-OM in different solvent (c = 1x10⁻⁵ M) ........................................................................................................ 163

Figure 4.b.15: (a) UV-Visible absorption spectra of 4-2M-OM in chloroform (c = 1x10⁻⁵ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light .................................................................................................................................................................................................................. 164

Figure 4.b.15: (b) UV-Visible absorption spectra of 5-2M-OM in chloroform (c = 1x10⁻⁵ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light .................................................................................................................................................................................................................. 164

Figure 4.b.15: (c) UV-Visible absorption spectra of 6-2M-OM in chloroform (c = 1x10⁻⁵ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light .................................................................................................................................................................................................................. 165

Figure 4.b.16: Molecular structure of trans (E) and cis (Z)-isomers of compound .................................................................................................................. 165

Figure 4.b.17: DFT optimized molecular structure of 5-2M-OM using B3LYP hybrid functional and the 6-311G (d, p) basis set ........................................ 168

Figure 4.b.18: Comparison of experimental UV-visible absorption spectrum with simulated spectrum obtained from time dependent DFT 6-311G (d, p) methods in gaseous phase for the compound 5-2M-OM .................................................................................................................................................................................................................. 169

Figure 4.b.19: HOMO and LUMO diagrams of compound 5-2M-OM (a and b respectively) ........................................................................................................ 169

Chapter 4C: Novel achiral 4-ring unsymmetrical bent core liquid crystals: methyl substitution at lateral position

Figure 4.c.1: Molecular structure and phase transition temperatures of compounds 1, 2 and 3 .................................................................................. 178

Figure 4.c.2: General molecular structure of the symmetrical compounds of the homologous series ........................................................................ 178

Figure 4.c.3: DSC thermogram of compound 4-2M-oM-OM and 8-2M-oM-OM at a rate 5 °C min⁻¹ in second heating and second cooling cycle .................................................. 185

Figure 4.c.4: DSC thermogram of compound 4-2M-mM-OM and 8-2M-mM-OM at a rate 5 °C min⁻¹ in second heating and second cooling cycle ........................................................................................................ 186
Figure 4.c.5: Phase transition temperatures of compounds, n-2M-oM-OM as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 187
Figure 4.c.6: Phase transition temperatures of compounds, n-2M-mM-OM as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 188
Figure 4.c.7: Enthalpy of compounds, n-2M-oM-OM as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 188
Figure 4.c.8: Enthalpy of compounds, n-2M-mM-OM as a function of number of carbons in the alkyl chain length in second scan at the rate 5 °C min⁻¹ .................................................. 189
Figure 4.c.9: Entropy of compounds, n-2M-oM-OM as a function of number of carbons in the alkyl chain length in first scan at the rate 5 °C min⁻¹ .................................................. 189
Figure 4.c.10: Entropy of compounds, n-2M-mM-OM as a function of number of carbons in the alkyl chain length in first scan at the rate 5 °C min⁻¹ .................................................. 190
Figure 4.c.11: Width of nematic phase range of compounds, n-2M-oM-OM as a function of number of carbons in the alkyl chain length in first scan at the rate 5 °C min⁻¹ .................................................. 190
Figure 4.c.12: Width of nematic phase range of compounds, n-2M-mM-OM as a function of number of carbons in the alkyl chain length in first scan at the rate 5 °C min⁻¹ .................................................. 191
Figure 4.c.13: Microphotographs of compound 4-2M-oM-OM and 8-2M-oM-OM at different temperatures in nematic phase in cooling cycle ................................................................. 192
Figure 4.c.14: Microphotographs of compound 4-2M-mM-OM and 8-2M-mM-OM at different temperatures in nematic phase in cooling cycle ................................................................. 192
Figure 4.c.15: UV-Visible absorption spectra of compounds n-2M-oM-OM in chloroform at c = 1x10⁻⁵ M ................................................................. 194
Figure 4.c.16: UV-Visible spectra of compounds n-2M-mM-OM in chloroform at c = 1x10⁻⁵ M ................................................................. 195
Figure 4.c.17: UV-Visible absorption spectra of 4-2M-oM-OM in CHCl₃ (c = 1x10⁻⁵ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light ................................................................. 195
Figure 4.c.18: UV-Visible absorption spectra of 4-2M-mM-OM in CHCl₃ (c = 1x10⁻⁵ M) and the changes in the absorption spectrum with respect to exposure time to UV light and in absence of light ................................................................. 196
Figure 4.c.19: Molecular structure of trans (E) and cis (Z)-isomers of compound ................................................................. 196

Chapter 4D: Copper (II) complexes of achiral four-ring unsymmetrical bent-core liquid crystals

Figure 4.d.1: Molecular structure of monosubstituted and dissubstituted copper salicylaldimine compounds ................................................................. 203
Figure 4.d.2: Representative microphotographs of each complex [n-2M-OM]₂Cu ................................................................. 210
Figure 4.d.3: (a) DSC thermogram of ligand 8-2M-OM and (b) corresponding copper complex [8-2M-OM]₂Cu at a heating and cooling rate 5 °C min⁻¹ ................................................................. 211
Figure 4.d.4: (a) DSC thermogram of ligand 18-2M-OM and (b) the
corresponding copper complex \([18-2M-OM]_2Cu\) at a heating and cooling rate 5 °C min\(^{-1}\).

Figure 4.d.5: Microphotographs of compound 8-2M-OM and \([8-2M-OM]_2Cu\) at different temperatures in nematic phase in cooling cycle.

Figure 4.d.6: Microphotographs of compound 18-2M-OM and \([18-2M-OM]_2Cu\) at different temperatures in nematic phase in cooling cycle.

Figure 4.d.7: Representative microphotographs of each complex \([n-2M-oM-OM]_2Cu\).

Figure 4.d.8: (a) DSC thermogram of ligand 8-2M-oM-OM and (b) corresponding copper complex \([8-2M-oM-OM]_2Cu\) at a heating and cooling rate 5 °C min\(^{-1}\).

Figure 4.d.9: Microphotographs of compound 8-2M-oM-OM and \([8-2M-oM-OM]_2Cu\) at different temperatures in nematic phase in cooling cycle.

Figure 4.d.10: Representative microphotographs of each complex \([n-2M-mM-OM]_2Cu\).

Figure 4.d.11: (a) DSC thermogram of ligand 8-2M-mM-OM and (b) corresponding copper complex \([8-2M-mM-OM]_2Cu\) at a heating and cooling rate 5 °C min\(^{-1}\).

Figure 4.d.12: Microphotographs of compound 8-2M-mM-OM and \([8-2M-mM-OM]_2Cu\) at different temperatures in nematic phase in cooling cycle.

Figure 4.d.13: Phase transition temperatures of compounds, \([n-2M-OM]_2Cu\) as a function of number of methylene units in the alkoxy chain at the rate 5 °C min\(^{-1}\).

Figure 4.d.14: Phase transition temperatures of compounds, \([n-2M-oM-OM]_2Cu\) as a function of number of methylene units in the alkoxy chain at the rate 5 °C min\(^{-1}\).

Figure 4.d.15: Phase transition temperatures of compounds, \([n-2M-mM-OM]_2Cu\) as a function of number of methylene units in the alkoxy chain at the rate of 5 °C min\(^{-1}\).

Figure 4.d.16: UV-Visible absorption spectra of ligand 8-2M-OM, 8-2M-oM-OM, 8-2M-mM-OM and their corresponding copper complexes \([n-2M-OM]_2Cu\), \([n-2M-oM-OM]_2Cu\), \([n-2M-mM-OM]_2Cu\) in chloroform (c = 1x10\(^{-5}\) M).
