LIST OF FIGURES

Fig-2.1: Health effects of pollution on human body
Fig-2.2: Structure of chlorophyll a and b
Fig-2.3 (a): Atomic structure of Ascorbic acid
Fig-2.3 (b): Model of vitamin ‘C’ molecule
Fig-4.1: Map of Aurangabad city showing study sites.
Fig-4.2: University area (Reference site).
Fig-4.3: Cannought place (Commercial site)
Fig-4.4: Kranti chowk (Traffic zone)
Fig-4.5: Chikalthana MIDC (Polluting zone)
Fig-4.6: Neem tree
Fig-4.7: Mango tree
Fig-4.8: Ashoka tree
Fig-4.9: Sheesham tree
Fig-5.1: Effect of light and dark on chlorophyll content in Mangifera indica.
Fig-5.2: Total chlorophyll content at reference and polluted sites.
Fig-5.3: Negative correlation of chlorophyll and ascorbic acid content in different seasons.
Fig-5.4: Photographs showing stomatal slides.
Fig-5.5: Graphs showing values of stomatal density at reference and polluted sites.
Fig-5.6: Seasonal variation of chlorophyll content in Azadirachta indica.
Fig-5.7: Seasonal variation of chlorophyll content in Mangifera indica.
Fig-5.8: Seasonal variation of chlorophyll content in Polyalthia longifolia.
Fig-5.9: Seasonal variation of chlorophyll content in Dalbergia sissoo.
Fig-5.10: Seasonal variation of ascorbic acid in Azadirachta indica.
Fig-5.11: Seasonal variation of ascorbic acid in Mangifera indica.
Fig-5.12: Seasonal variation of ascorbic acid in *Polyalthia longifolia*.
Fig-5.13: Seasonal variation of ascorbic acid in *Dalbergia sissoo*.
Fig-5.14: Seasonal variation of relative water content in *Azadirachta indica*.
Fig-5.15: Seasonal variation of relative water content in *Mangifera indica*.
Fig-5.16: Seasonal variation of relative water content in *Polyalthia longifolia*.
Fig-5.17: Seasonal variation of relative water content in *Dalbergia sissoo*.
Fig-5.18: Seasonal variation of leaf extracts pH in *Azadirachta indica*.
Fig-5.19: Seasonal variation of leaf extracts pH in *Mangifera indica*.
Fig-5.20: Seasonal variation of leaf extracts pH in *Polyalthia longifolia*.
Fig-5.21: Seasonal variation of leaf extracts pH in *Dalbergia sissoo*.
Fig-5.22: Seasonal variation of APTI in *Azadirachta indica*.
Fig-5.23: Seasonal variation of APTI in *Mangifera indica*.
Fig-5.24: Seasonal variation of APTI in *Polyalthia longifolia*.
Fig-5.25: Seasonal variation of APTI in *Dalbergia sissoo*.
Fig-5.26: Dusted leaves from reference (University area) and polluted (Kranti Chowk) site.
Fig-5.27: Seasonal variation of deposited dust in *Azadirachta indica*.
Fig-5.28: Seasonal variation of deposited dust in *Mangifera indica*.
Fig-5.29: Seasonal variation of deposited dust in *Polyalthia longifolia*.
Fig-5.30: Seasonal variation of deposited dust in *Dalbergia sissoo*.
Fig-5.31: Condition of air in Aurangabad city.
Fig-5.32: Major source of air pollution in Aurangabad city.
Fig-5.33: Diseases due to air pollution.
Fig-5.34: Factor which will be effective to control air pollution.
Fig-5.35: Role of trees in controlling air pollution.
Fig-5.36: Most important role of trees in our surrounding.
Fig-5.37: Aim of planting trees in our surrounding.
Fig-5.38: Most important value of tree.
Fig-5.39: Type of tree suggested for planting.
Fig-5.40: Most beneficial tree species.
Fig-5.41: Plants planted by an individual.
Fig-5.42: Plants those are still alive.
Fig-5.43: Citizens aware of importance of trees.
Fig-5.44: Need of more education about the importance of trees.
Fig-5.45: Need of special rules and regulations to protect trees.
Fig-5.46: Trees that should be protect preferably.
Fig-5.47: Preferred locations for trees.
Fig-5.48: Most important ecological role of trees.
Fig-5.49: Importance of trees for existence of human life.
Fig-5.50: Importance of trees for habitat.
Fig-5.51: Importance of trees for Aesthetic value.
Fig-5.52: Importance of trees for clean air.
Fig-5.53: Importance of trees for water quality.
Fig-5.54: Importance of trees for property value.
