SUMMARY

The present study deals with the comparison of personality traits between and Swami Ramanand Teerth Marathwada University Football players with respect to neuroticism, Extraversion, Psychoticism and Lie-scale. The age ranged of Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players were 18-25 year. The data was collected with the help of Eysenck personality inventory. This inventory provides four psychological dimensions viz; Neuroticism, Extraversion, Psychoticism and Lie-scale.

In this study total 300 players were selected; out of them 150 were from Dr. Babasaheb Ambedkar Marathwada University Football players and Ramanand Teerth Marathwada University Football players. The data was treated statistically by employing “t” test to determine the significant difference of personality characteristics of football players.

It had been hypothesised that there would be no significant difference of personality characteristics with respect to neuroticism between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. The results of the study (Table-2.1) revealed the existence of statistically significant difference of personality characteristics with respect to neuroticism was found between and Swami Ramanand Teerth Marathwada University Football players. Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more
neurotic tendency as compared to Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesised that there would be no significant difference of personality characteristics with respect to extravertion of and Swami Ramanand Teerth Marathwada University Football players. The results of the study (Table 2.2) revealed the existence of statistically significant difference of personality characteristics with respect to extravertion was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. It was found to have got more extravertion tendency as compared to Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesised that there would be no significant difference of personality characteristics with respect to psychoticism between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. The results of the study indicates (Table 2.3) that statistically significant difference of personality characteristics was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players was found to have got less psychotic tendency as compared to Dr. Babasaheb Ambedkar Marathwada University Football players. The result of the study did support to the fourth hypothesis of the study where in, It was stated that there would be no significant difference of personality characteristics with respect to psychoticism because, t-statistics reveals no statistically significant difference of personality traits with respect to psychoticism.

It has been hypothesized that there would be no significant difference of personality traits with respect to neuroticism of Lower age
and Lower age Swami Ramanand Teerth Marathwada University Football players. The results of the study (Table 2.5) revealed the existence of statistically significant difference of personality characteristics with respect to neuroticism was found between lower age Dr. Babasaheb Ambedkar Marathwada University Football players and lower age Swami Ramanand Teerth Marathwada University Football players. was found to have got more neurotic tendency as compared to Swami Ramanand Teerth Marthwada University Football players.

It has been hypothesized that there would be no significant difference of personality traits with respect to psychoticism of Lower age Dr. Babasaheb Ambedkar Marathwada University Football players and Lower age Swami Ramanand Teerth Marathwada University Football players. The results of the study (Table 2.6) revealed the existence of statistically significant difference of personality characteristics with respect to psychoticism was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players was found to have got more psychotic tendency as compared to Dr. Babasaheb Ambedkar Marathwada University Football players.

It has been hypothesized that there would be no significant difference of personality traits with respect to extravert of Lower age Swami Ramanand Teerth Marthwada University Football players. The results of the study indicated (Table 2.7) that statistically significant difference of personality characteristics with respect to extravertion was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. Swami Ramanand Teerth Marthwada University Football players was found to have got less extrovert tendency as
compared to Dr. Babasaheb Ambedkar Marathwada University Football players.

It has been hypothesized that there would be no significant difference of personality traits with respect to lie scale of Lower age Dr. Babasaheb Ambedkar Marathwada University Football players and Lower age Swami Ramanand Teerth Marthwada University Football players. The results of the study revealed that (Table-2.8) statistically significant difference of personality traits with respect to lie-scale was found between Swami Ramanand Teerth Marthwada University Football players. It was found to have got more liar as compared to Swami Ramanand Teerth Marthwada University Football players.

It has been hypothesized that there would be no significant difference of personality traits with respect to neuroticism of Upper age and Upper age Swami Ramanand Teerth Marthwada University Football players. The results of the study (Table 2.9) revealed the existence of statistically significant difference of personality characteristics with respect to neuroticism was found between Upper age and Upper age Swami Ramanand Teerth Marthwada University Football players. Upper age was found to have got more neuratic tendency as compared to Upper age Swami Ramanand Teerth Marthwada University Football players.

It has been hypothesized that there would be no significant difference of personality traits with respect to psychoticism of Upper age Swami Ramanand Teerth Marthwada University Football players. The results of the study (Table 2.10) revealed the existence of statistically significant difference of personality characteristics with respect to psychoticism was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada
University Football players. It was found to have got Swami Ramanand Teerth Marthwada University Football players more psychotic tendency.

It has been hypothesized that there would be no significant difference of personality traits with respect to extravertion of Upper age Swami Ramanand Teerth Marthwada University Football players. The results of the study indicated (Table 2.11) that statistically significant difference of personality characteristics with respect to extravertion was found between Upper age Dr. Babasaheb Ambedkar Marathwada University Football players and Upper age Dr. Babasaheb Ambedkar Marathwada University Football players. Upper age Swami Ramanand Teerth Marthwada University Football players was found to have got less extrovert tendency as compared to Upper age Dr. Babasaheb Ambedkar Marathwada University Football players.

It has been hypothesized that there would be no significant difference of personality traits with respect to lie scale of Upper age Dr. Babasaheb Ambedkar Marathwada University Football players and Upper age Swami Ramanand Teerth Marthwada University Football players. The results of the study revealed that (Table-2.12) statistically significant difference of personality traits with respect to lie-scale was found between Upper age Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. Dr. Babasaheb Ambedkar Marathwada University Football players were found to have got more liar as compared to Swami Ramanand Teerth Marthwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to neuroticism of Lower age Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. The
results of the study revealed that (Table-2.13) statistically significant difference of personality traits with respect to neuroticism was found between **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more neurotic as compared to Swami Ramanand Teerth Marathwada University Football players. Which means that Swami Ramanand Teertth Marthwada University Football players incur less significant neurotic as compared to Dr. Babasaheb Ambedkar Marathwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to psychoticism of **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. The results of the study revealed that (Table-2.14) statistically significant difference of personality traits with respect to psychoticism was found between **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more psychotic as compared to Swami Ramanand Teertth Marthwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to extraversion of **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. The results of the study revealed that (Table-2.15) statistically significant difference of personality traits with respect to extraversion was found
between **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more extravert as compared to Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. The results of the study revealed that (Table-2.16) statistically significant difference of personality traits with respect to lie-scale was found between **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. **Lower age (18-21)** Dr. Babasaheb Ambedkar Marathwada University Football players were found to have got more liar as compared to Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to neuroticism of **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. The results of the study revealed that (Table-2.17) statistically significant difference of personality traits with respect to neuroticism was found between **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football player’s were found to have
got more neurotic as compared to Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to psychoticism of **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. The results of the study revealed that (Table-2.18) statistically significant difference of personality traits with respect to psychoticism was found between **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more psychotic as compared to Swami Ramanand Teerth Marthwada University Football players.

It had been hypothesized there would be no significant difference of personality traits with respect to extraversion of **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. The results of the study revealed that (Table-2.19) statistically significant difference of personality traits with respect to extraversion was found between **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players. **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more extrovert as compared to Swami Ramanand Teerth Marthwada University Football players.

It had been hypothesised there would be no significant difference of personality traits with respect to lie-scale of **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and
Swami Ramanand Teerth Marthwada University Football players. The results of the study revealed that (Table-2.20) no statistically significant difference of personality traits with respect to lie-scale was found between **Upper age (22-25)** Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marthwada University Football players was found.

It had been hypothesised that there would be no significant difference of personality characteristics with respect to neuroticism between Dr. Babasaheb Ambedkar Marathwada University Football players and **Lower age (18-21)** Swami Ramanand Teerth Marthwada University Football players. The results of the study (Table-2.21) revealed the existence of statistically significant difference of personality characteristics with respect to neuroticism was found between Dr. Babasaheb Ambedkar Marathwada University Football players and **Lower age (18-21)** Swami Ramanand Teerth Marthwada University Football players. Dr. Babasaheb Ambedkar Marathwada University Football players were found to have got more neurotic tendency as compared to Swami Ramanand Teerth Marthwada University Football players. Which means that Swami Ramanand Teerth Marthwada University Football players incur less significant neurotic tendency as compared to their counterpart? Thus the hypothesis of the study was not accepted

It had been hypothesised that there would be no significant difference of personality characteristics with respect to extraversion of Dr. Babasaheb Ambedkar Marathwada University Football players and **Lower age (18-21)** Swami Ramanand Teerth Marthwada University Football players. The results of the study (Table 2.22) revealed the existence of statistically significant difference of personality characteristics with respect to extraversion was found between Dr.
Babasaheb Ambedkar Marathwada University Football players and *Lower age (18-21)* Swami Ramanand Teerth Marathwada University Football players. Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more extraversion tendency as compared to *Lower age (18-21)* Swami Ramanand Teerth Marathwada University Football players. Which means that Swami Ramanand Teerth Marathwada University Football players incur significantly less extravert tendency as compared to their counterparts.

It had been hypothesised that there would be no significant difference of personality difference with respect to psychoticism between Dr. Babasaheb Ambedkar Marathwada University Football players and *Lower age (18-21)* Swami Ramanand Teerth Marathwada University Football players. The results of the study indicates (Table 2.23) that statistically significant difference of personality characteristics was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. *Lower age (18-21)* Swami Ramanand Teerth Marathwada University Football players was found to have got less psychotic tendency as compared to Dr. Babasaheb Ambedkar Marathwada University Football players.

The result of the study did support to the fourth hypothesis of the study where in, It was stated that there would be no significant difference of personality traits with respect to lie-scale between Dr. Babasaheb Ambedkar Marathwada University Football and Lower age Swami Ramanand Teerth Marathwada University Football players because, t-statistics reveals no statistically significant difference of personality traits with respect to lie-scale.

It had been hypothesised that there would be no significant difference of personality characteristics with respect to neuroticism
between Dr. Babasaheb Ambedkar Marathwada University Football players and **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players. The results of the study (Table-2.25) revealed the existence of statistically significant difference of personality characteristics with respect to neuroticism was found between Dr. Babasaheb Ambedkar Marathwada University Football players and **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players. Dr. Babasaheb Ambedkar Marathwada University Football players were found to have got more neurotic tendency as compared to Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesised that there would be no significant difference of personality characteristics with respect to extraversion of Dr. Babasaheb Ambedkar Marathwada University Football players and **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players. The results of the study (Table 2.26) revealed the existence of statistically significant difference of personality characteristics with respect to extraversion was found between Dr. Babasaheb Ambedkar Marathwada University Football players and **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players. Dr. Babasaheb Ambedkar Marathwada University Football players was found to have got more extravert tendency as compared to **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players.

It had been hypothesised that there would be no significant difference of personality difference with respect to psychoticism between Dr. Babasaheb Ambedkar Marathwada University Football players and **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players. The results of the study indicates (Table
that statistically significant difference of personality characteristics was found between Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand Teerth Marathwada University Football players. **Upper age (22-25)** Swami Ramanand Teerth Marathwada University Football players was found to have got less psychotic tendency as compared to Dr. Babasaheb Ambedkar Marathwada University Football players.

The result of the study did support to the fourth hypothesis of the study where in, It was stated that there would be no significant difference of personality traits with respect to lie-scale between Dr. Babasaheb Ambedkar Marathwada University Football players and Upper age Swami Ramanand Teerth Marathwada University Football players because, t-statistics reveals no statistically significant difference of personality traits with respect to lie-scale.

**CONCLUSION**

1) Significant difference of personality characteristics with respect to neuroticism was found between Dr. Babasaheb Ambedkar Marathwada University, Aurangabad football players and Swami Ramanand Teerth Marathwada University, Nanded football players. Dr. Babasaheb Ambedkar Marathwada University football players have more neurotic tendency has compare to Swami Ramanand Teerth Marathwada University football players.

2) Significant difference of personality characteristics was found between Dr. Babasaheb Ambedkar Marathwada University and Swami Ramanand Teerth Marathwada University football players. Dr. Babasaheb Ambedkar Marathwada University football players
have more extravert tendency as compare to Swami Ramanand Teerth Marathwada University football players.

3) Dr. Babasaheb Ambedkar Marathwada University football players have more psychotic tendency as compare to Swami Ramanand Teerth Marathwada University football players. With regards to psychoticism significant difference was found out.

4) No statically significant difference of personality traits with respect to lie-scale.

5) Lower age (18-21) Dr. Babasaheb Ambedkar Marathwada University football players was found to have got more neurotic tendency as compare to Swami Ramanand Teerth Marathwada University football players. Incur less significantly neurotic as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

6) Significant difference of personality characteristic with respect to psychotic have age (18-21) Dr. Babasaheb Ambedkar Marathwada Universuty football players have less psychotic tendency as compare to Swami Ramanand Teerth Marathwada University football players.

7) Lower age (18-21) Dr. Babasaheb Ambedkar Marathwada Universuty football players was found to have more got more extravert tendency as compare to Swami Ramanand Teerth Marathwada University football players. Which reveals the significant difference was found out in lower age (18-21).

8) Significant difference of personality traits with respect to lie scale was found out in lower age (18-21) between Dr. Babasaheb Ambedkar Marathwada Universuty football players and Swami Ramanand Teerth Marathwada University football players. Dr. Babasaheb Ambedkar Marathwada Universuty football players
having more lie tendency as compare to Swami Ramanand Teerth Marathwada University football players.

9) Upper age (22-25) Dr. Babasaheb Ambedkar Marathwada University football players having more neurotic tendency as compare to Swami Ramanand Teerth Marathwada University football players statistically significant difference of personality traits with respect to neuroticism in between Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players.

10) As per the table 2010 statistically significant difference with respect to psychoticism was found between upper age (22-25) of Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University. Swami Ramanand Teerth Marathwada University football players have more psychotic tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

11) Significant difference of personality characteristics with respect to extraversion of upper age (22-25) Swami Ramanand Teerth Marathwada University football players having more extravert as compare to Dr. Babasaheb Ambedkar Marathwada University football players significantly Swami Ramanand Teerth Marathwada University football players incur more extravert tendency.

12) Upper age (22-25) Dr. Babasaheb Ambedkar Marathwada University football players more lie tendency as compare to Swami Ramanand Teerth Marathwada University football players.

13) With respect to personality characteristic of neuroticism significant difference was found not between Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players. The lower age Dr.
Babasaheb Ambedkar Marathwada University football players were have more neurotic tendency as compare to Swami Ramanand Teerth Marathwada University football players.

14) Lower age Swami Ramanand Teerth Marathwada University football players having loss psychotic tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

15) Significant difference of personality characteristic with respect to extra version of lower age (18-21) of Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players. Dr. Babasaheb Ambedkar Marathwada University football players have more extravert tendency as compare to Swami Ramanand Teerth Marathwada University football players.

16) Significant difference of personality characteristic with respect to lie scale Dr. Babasaheb Ambedkar Marathwada University football players have got less lies tendency as compare to Swami Ramanand Teerth Marathwada University football players.

17) Significant difference of personality characteristic with respect to neuroticism was found in upper age (22-25) Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players. Dr. Babasaheb Ambedkar Marathwada University football players having more neurotic tendency as compare to Swami Ramanand Teerth Marathwada University football players.

18) Upper age 22-25 Dr. Babasaheb Ambedkar Marathwada University football players was got more psychotic tendency as compare to Swami Ramanand Teerth Marathwada University football players. Dr. Babasaheb Ambedkar Marathwada University football players
have more psychotic tendency as compare to Swami Ramanand Teerth Marathwada University football players.

19) Upper age (22-25) Swami Ramanand Teerth Marathwada University football players was found more extravert tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

20) As per the statistic upper age (22-25) Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players in not significant with respect to lie scale of personality characteristic.

21) Lower age (18-21) Swami Ramanand Teerth Marathwada University football players was found to have got more neurotic tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

22) Significant difference of personality that with respect to extravertion was found between lower age (18-21) Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players. Swami Ramanand Teerth Marathwada University football players have more extravert tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

23) Table 2.23 reveals the significant difference of personality traits with respect to psychoticism Swami Ramanand Teerth Marathwada University football players have more psychotic as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

24) Lower age (18-21) Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players have not having significant difference with respect to lie scale.
25) Upper age (22-25) statistically significant difference of personality characteristic with respect to neuroticism was found between Dr. Babasaheb Ambedkar Marathwada University football players and Swami Ramanand Teerth Marathwada University football players. Swami Ramanand Teerth Marathwada University football players have more neurotic tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

26) Upper age (22-25) Swami Ramanand Teerth Marathwada University football players was found to have got more extravert tendency as compare to Dr. Babasaheb Ambedkar Marathwada University football players.

27) Significant difference with respect to personality characteristic of upper age (22-25) psychoticism tendency of Swami Ramanand Teerth Marathwada University football players have more then the Dr. Babasaheb Ambedkar Marathwada University football players. The Swami Ramanand Teerth Marathwada University football players incur psychotic tendency.

28) Upper age (22-25) Swami Ramanand Teerth Marathwada University football players incur more lie tendency then Dr. Babasaheb Ambedkar Marathwada University football players.

**RECOMMENDATION:**

The findings of the present study would lead to the following recommendation

1) A Similar study could be done in different game and sports.

2) A Similar Study could be done at high level players like National, International and Olympic Players.

3) A Similar study could be done among Dr. Babasaheb Ambedkar Marathwada University Football players and Swami Ramanand
Teerth Marthwada University Football players and others game and sports.

4) A similar study could be investigated among the players of two or more games.

5) A similar study could be done with subject belonging to different age groups.
